unidentified identity

destroying heritage

Praga typology, cacophony of styles

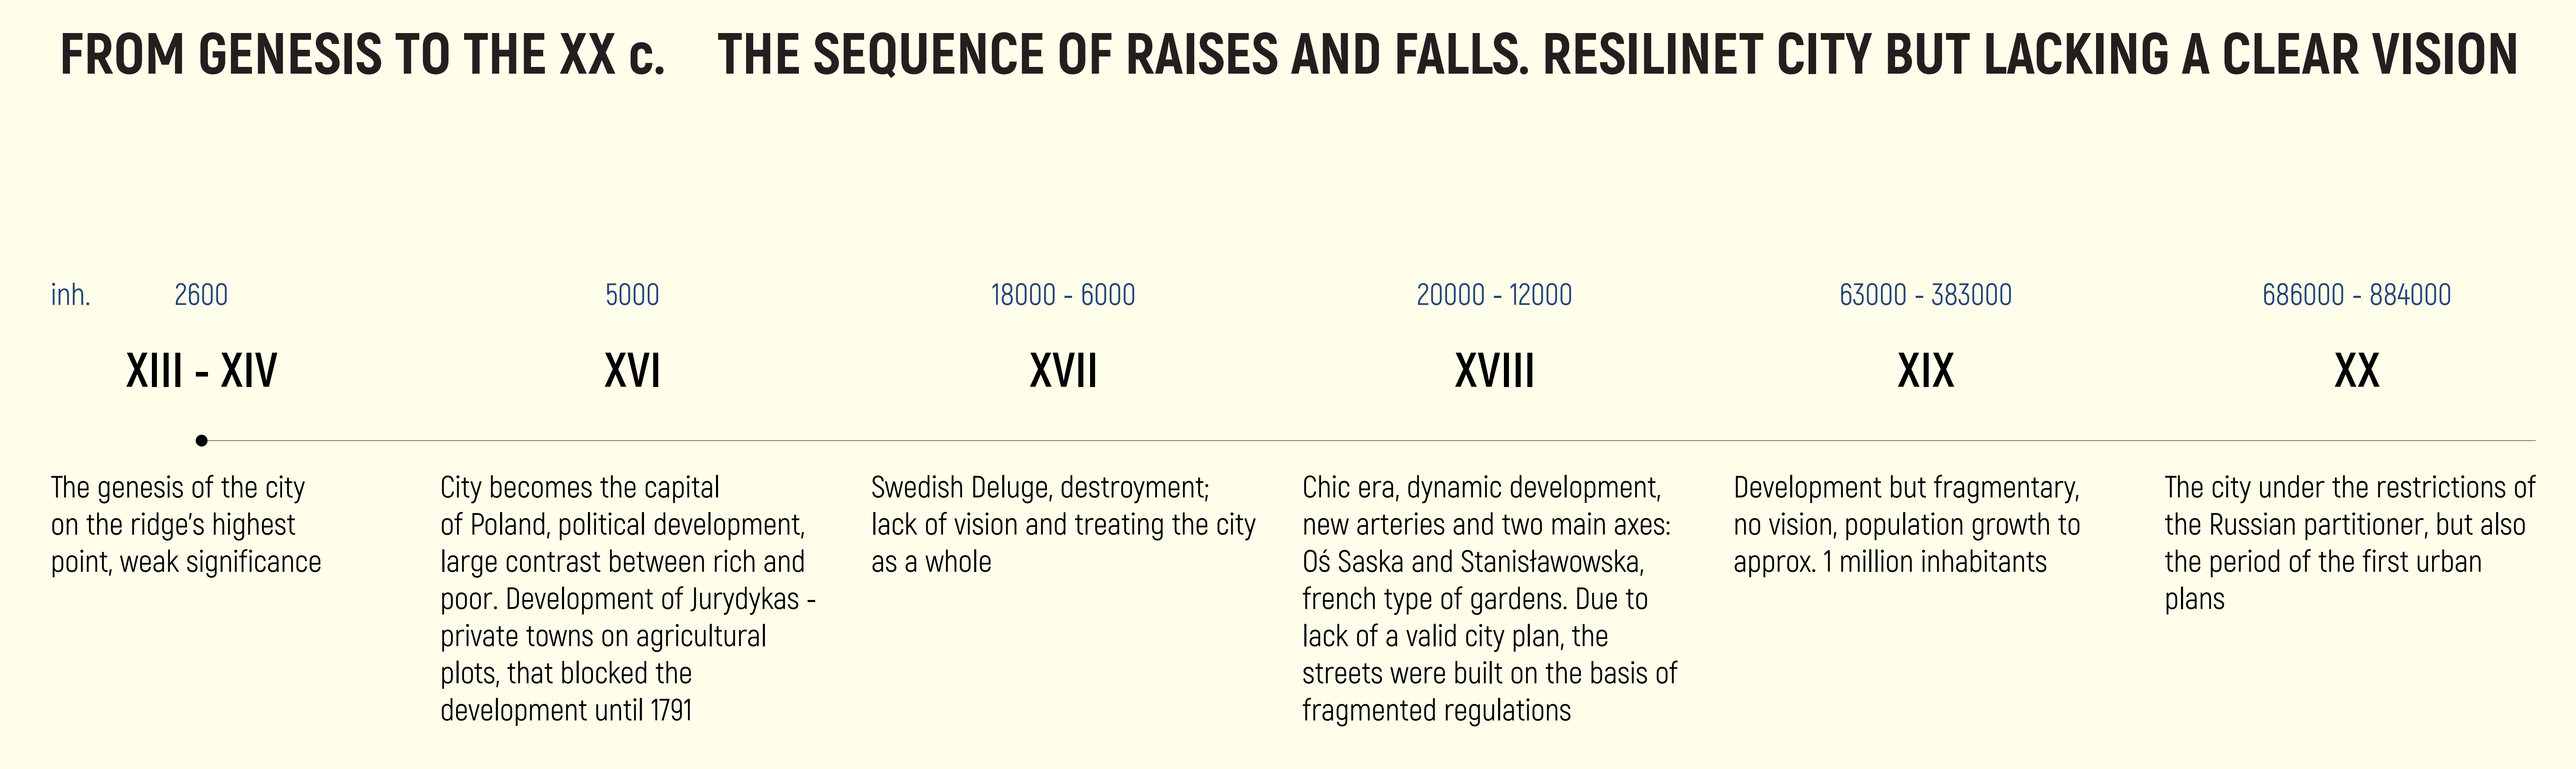

In Warsaw many impacts happened.
Demolishing, starting over, blindly adding something
will have a negative impact on a city again.

FRAGMENTATION = LACK OF VISION

HISTORY OVERVIEW

XVI c.
Warsaw became the capital of Poland. There was a large contrast between rich two castles and the province. A rare phenomenon arose - Jurydyki - private towns on agricultural plots. They blocked the development of the city until 1791, when it was dissolved. The only element of the continuation of their structure is Krakowskie Przedmieście street.

XVIII c.
Dynamic development, new arteries and two main axis: Oś Saska and Stanisławowska; french type of gardens and palaces. The dissolving of Jurydykas lead to join Praga district to the city. Due to the lack of valid city plan, the streets were built on the basis of fragmented regulations.

1928 - 1929
Scheme representing the rules of creating the city structure. the idea highlighted the importance of one center.

1930
Modernism. 'Dragonfly' model from the Athenian card. Believe in Varsovian transcontinental importance.

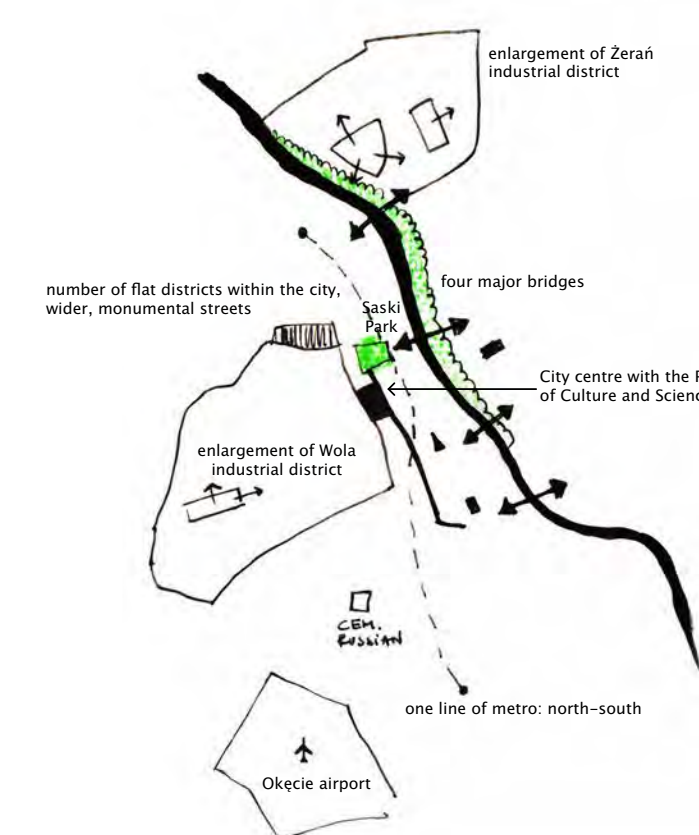

1930
Node places in the structure of the public space in the central part of Warsaw. the proposal for a development: red full - existing, shaped, red empty - existing, unshaped, blue - new, proposed to shape.

1945
Hitler's Pabst Plan.

1945 - 1950
Recovering destroyed space. Sketch of a plan of central district, providing for division of the city structure into three meridian zones separated by green zones with a separate central district and two lines towards north-south.

1950 - 1956
"Six-year Warsaw reconstruction plan" significantly influenced the shape of today's city. The drawing shows only decisions favorable for the city.

2016
Node places in the structure of the public space in th central part of Warsaw. Red full - existing, shaped, red empty - existing, unshaped.

SURVEY WITH INHABITANTS

experiencing the city space

“Before the war Warsaw was designed for people, for their needs with thought about good communication and common space to live. The war and communism destroyed these ideas in favor of developers”

Are you native Varsovian?
yes
no

What distance do you defeat to work?
till 5 km
5 - 10 km
more than 10 km
I work in various places
I work at home
I don't work

What kind of transport do you usually use?
metro
bus
tram
car
bicycle
taxi
uber
walk
other

Should the Palace of Culture and Science (PKiN) be demolished?
yes
no

In case PKiN stays, around it there should be:
place for art
skyscrapers
nature park
rich program with restaurants etc.
housing f. and limited central square
dafilade and concert space (empty)
otherhh

Do you have sometimes an urge to escape the city?
yes
no

Do you take part in demonstrations?
yes
no

What a centre of a city means to you?
middle point
communication node
place with public buidlings
place with commercial facilities
meeting point, most dynamic place
most dense place

Do you see a specific problem of Warsaw? What kind of?
smog
lack of spatial planning
current government
rather not
traffic
lack of good promotion
rasism
high prices
lack of green
lack of bike lanes
lack of centre

Where is in your opinion the Warsaw's centre?
area next to PKiN
there is no
Old City and New World
other

experiencing the city through emotions

*“It saddens me that Warsaw is teared apart by money driven developers.
It saddens me that the politicians deprive the city from trees
and have air pollution for nothing”*

What kind of emotions do you feel while going through the city?

fear against smog
annoyed by traffic
contentment
annoyed by crowd

*“ I’m fascinated
by photogenic quality
of Warsaw
during each season.”*

What touches you?

nothing
people
historym, heroism
ghetto memorials
WOSP foundation festival
the fact that all polish nation have built the city
parks and monuments
pre-war buildings
lightened city

What charms you?

street musicians
Wisła River
people
dynamics, diversity
nothing
Old City
nature
Praga district
metropolitan feeling
history
lots of cultural facilities

What makes you sad?

smog
large distances
nothing
spatial chaos, dirt
monthly anniversary of Smoleńsk
demolition of old Warsaw
old Praga district
wild reprivatISATION
people
amount of cars in the city
social division

*“Spatial chaos
makes me angry”.*

What do you usually hear from the tourists while talking about Warsaw?

large distances
clean city
people are ok
too chaotic
surprised by lack of a centre
impressive development
terrible infrastructure
noisy city
beautiful parks and Old City
not pretty city
lots of cool facilities

What makes you angry about Warsaw?

smog
Old City
crowd
traffic
large distances
Mordor district (corporations)
nothing
life speed
people
bad quality of space, advertisement
monthly anniversary of Smoleńsk (plain crash)

*“ I enjoy walking through the
historical parts of Warsaw.
I feel then better contact
with the architectural tradition
and sort of continuation ...”*

What surprises you?

the idiocy of officials
infrastructure (negatively)
themes of demonstrations
nothing
amount of foreigners (positively)
dynamics
people
10 tears lasting metro development

What makes you laugh?

nothing
government
street parades
people, social life
diversity of attractions
PKiN
the rainbow theme at Zbawiciel Sqaure
(continuously built and demolished gay symbol)

assessment of the existing situation

Which place in Warsaw do you visit most often?

Zbawiciela square 3
Vistula river 6
Ujazdowski Park 3

LINEAR VISION OF ACTIVITIES

The view at a new urban island from the river side [A] and at the river from the new beach [B]

The view [C] at the Castle from the eastern bank.
The existing highway, that is located between the Castle and Vistula, is replaced to an underground tunnel.
In a result, a new public space is created and desirable connection between Old City and the river.

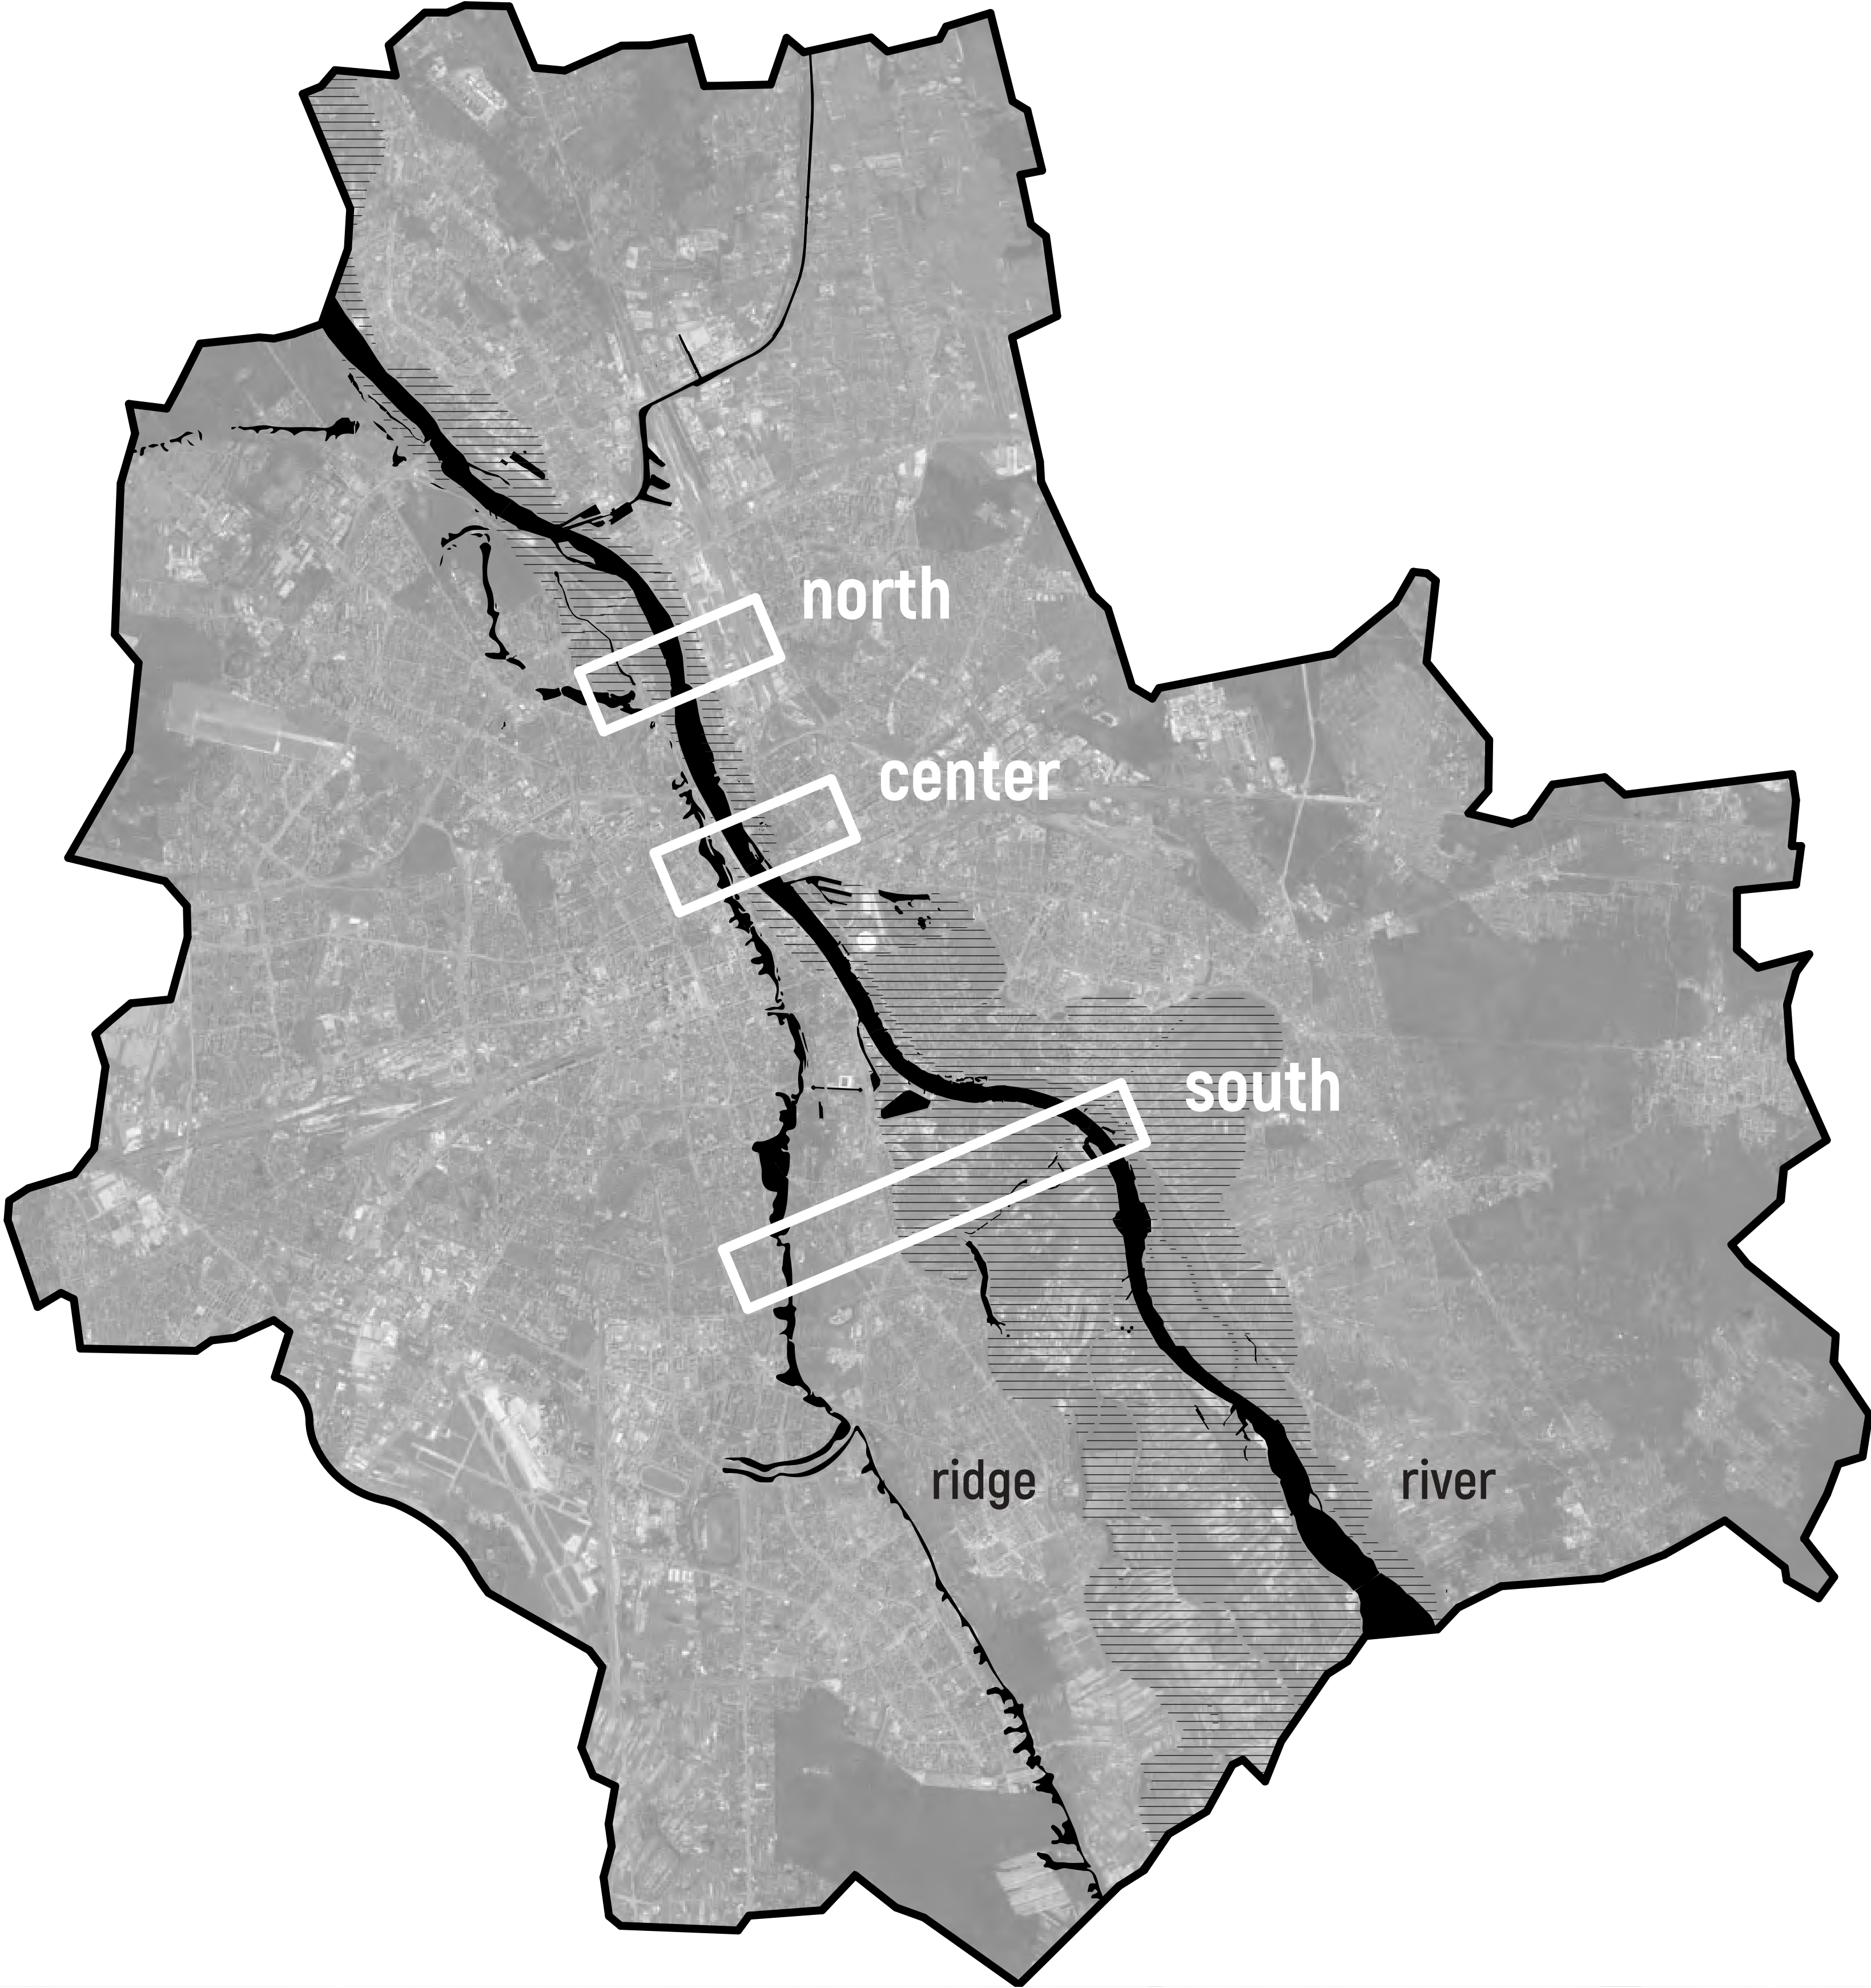

The view [D] at Siekierkowski bridge from the east bank.
This site has full of natural landscape qualities.
It is dedicated mostly for leisure and recreation.

The view [E] at a new district located between the ridge and the river in Siekierki district. It is a new local center with many different functions for newcomers. The quality of the space largely defines the presence of water, which offers users a lot of activities.

The view [F] represents an urban island that is located in very natural environment. The island itself has hard edges and offers lots of activities related to the river.

DESIGN LOCATIONS CHOICE

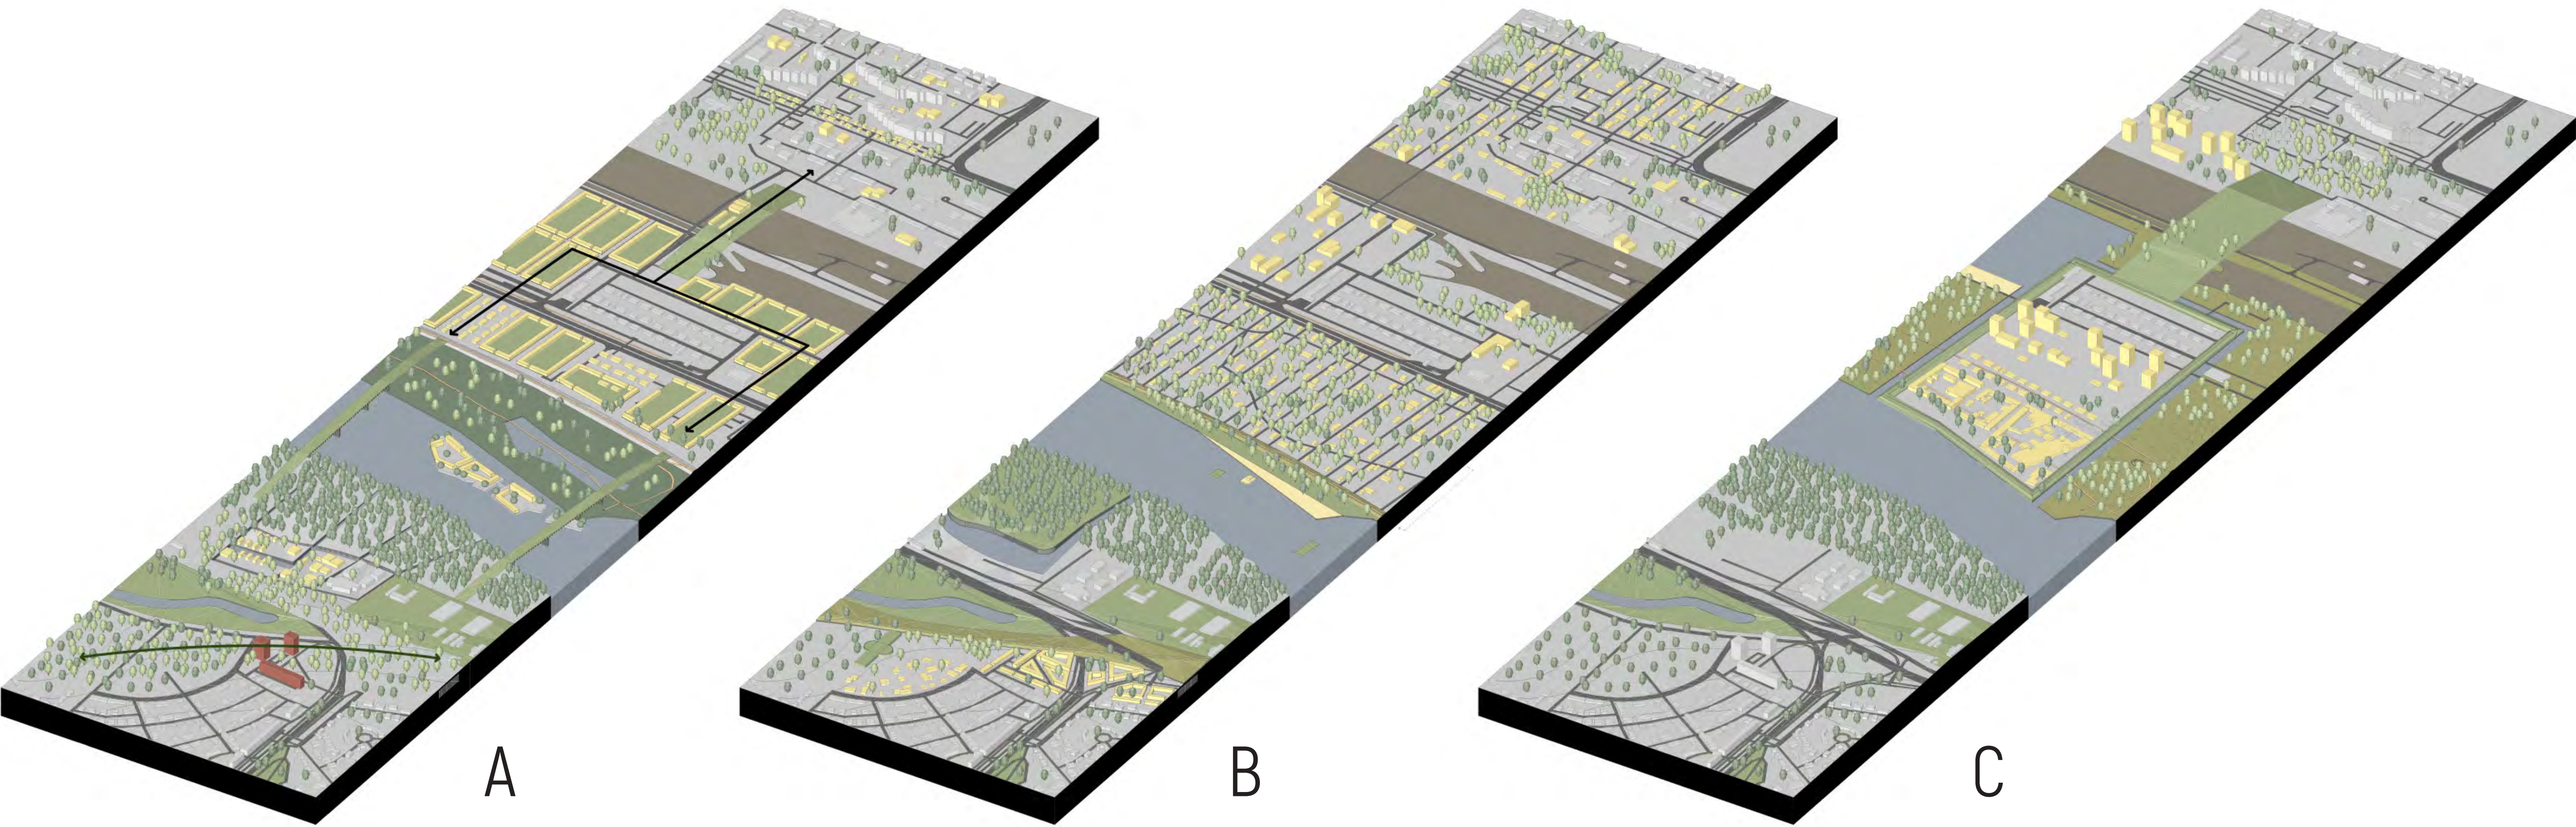

Three locations of different ridge and river relation.
Three extreme zones of different problems and potentials.

TESTING SCENARIO'S

location : north

three principles : A - **linear urban nature** B - **relation to history** C - **alternate access for red and green**

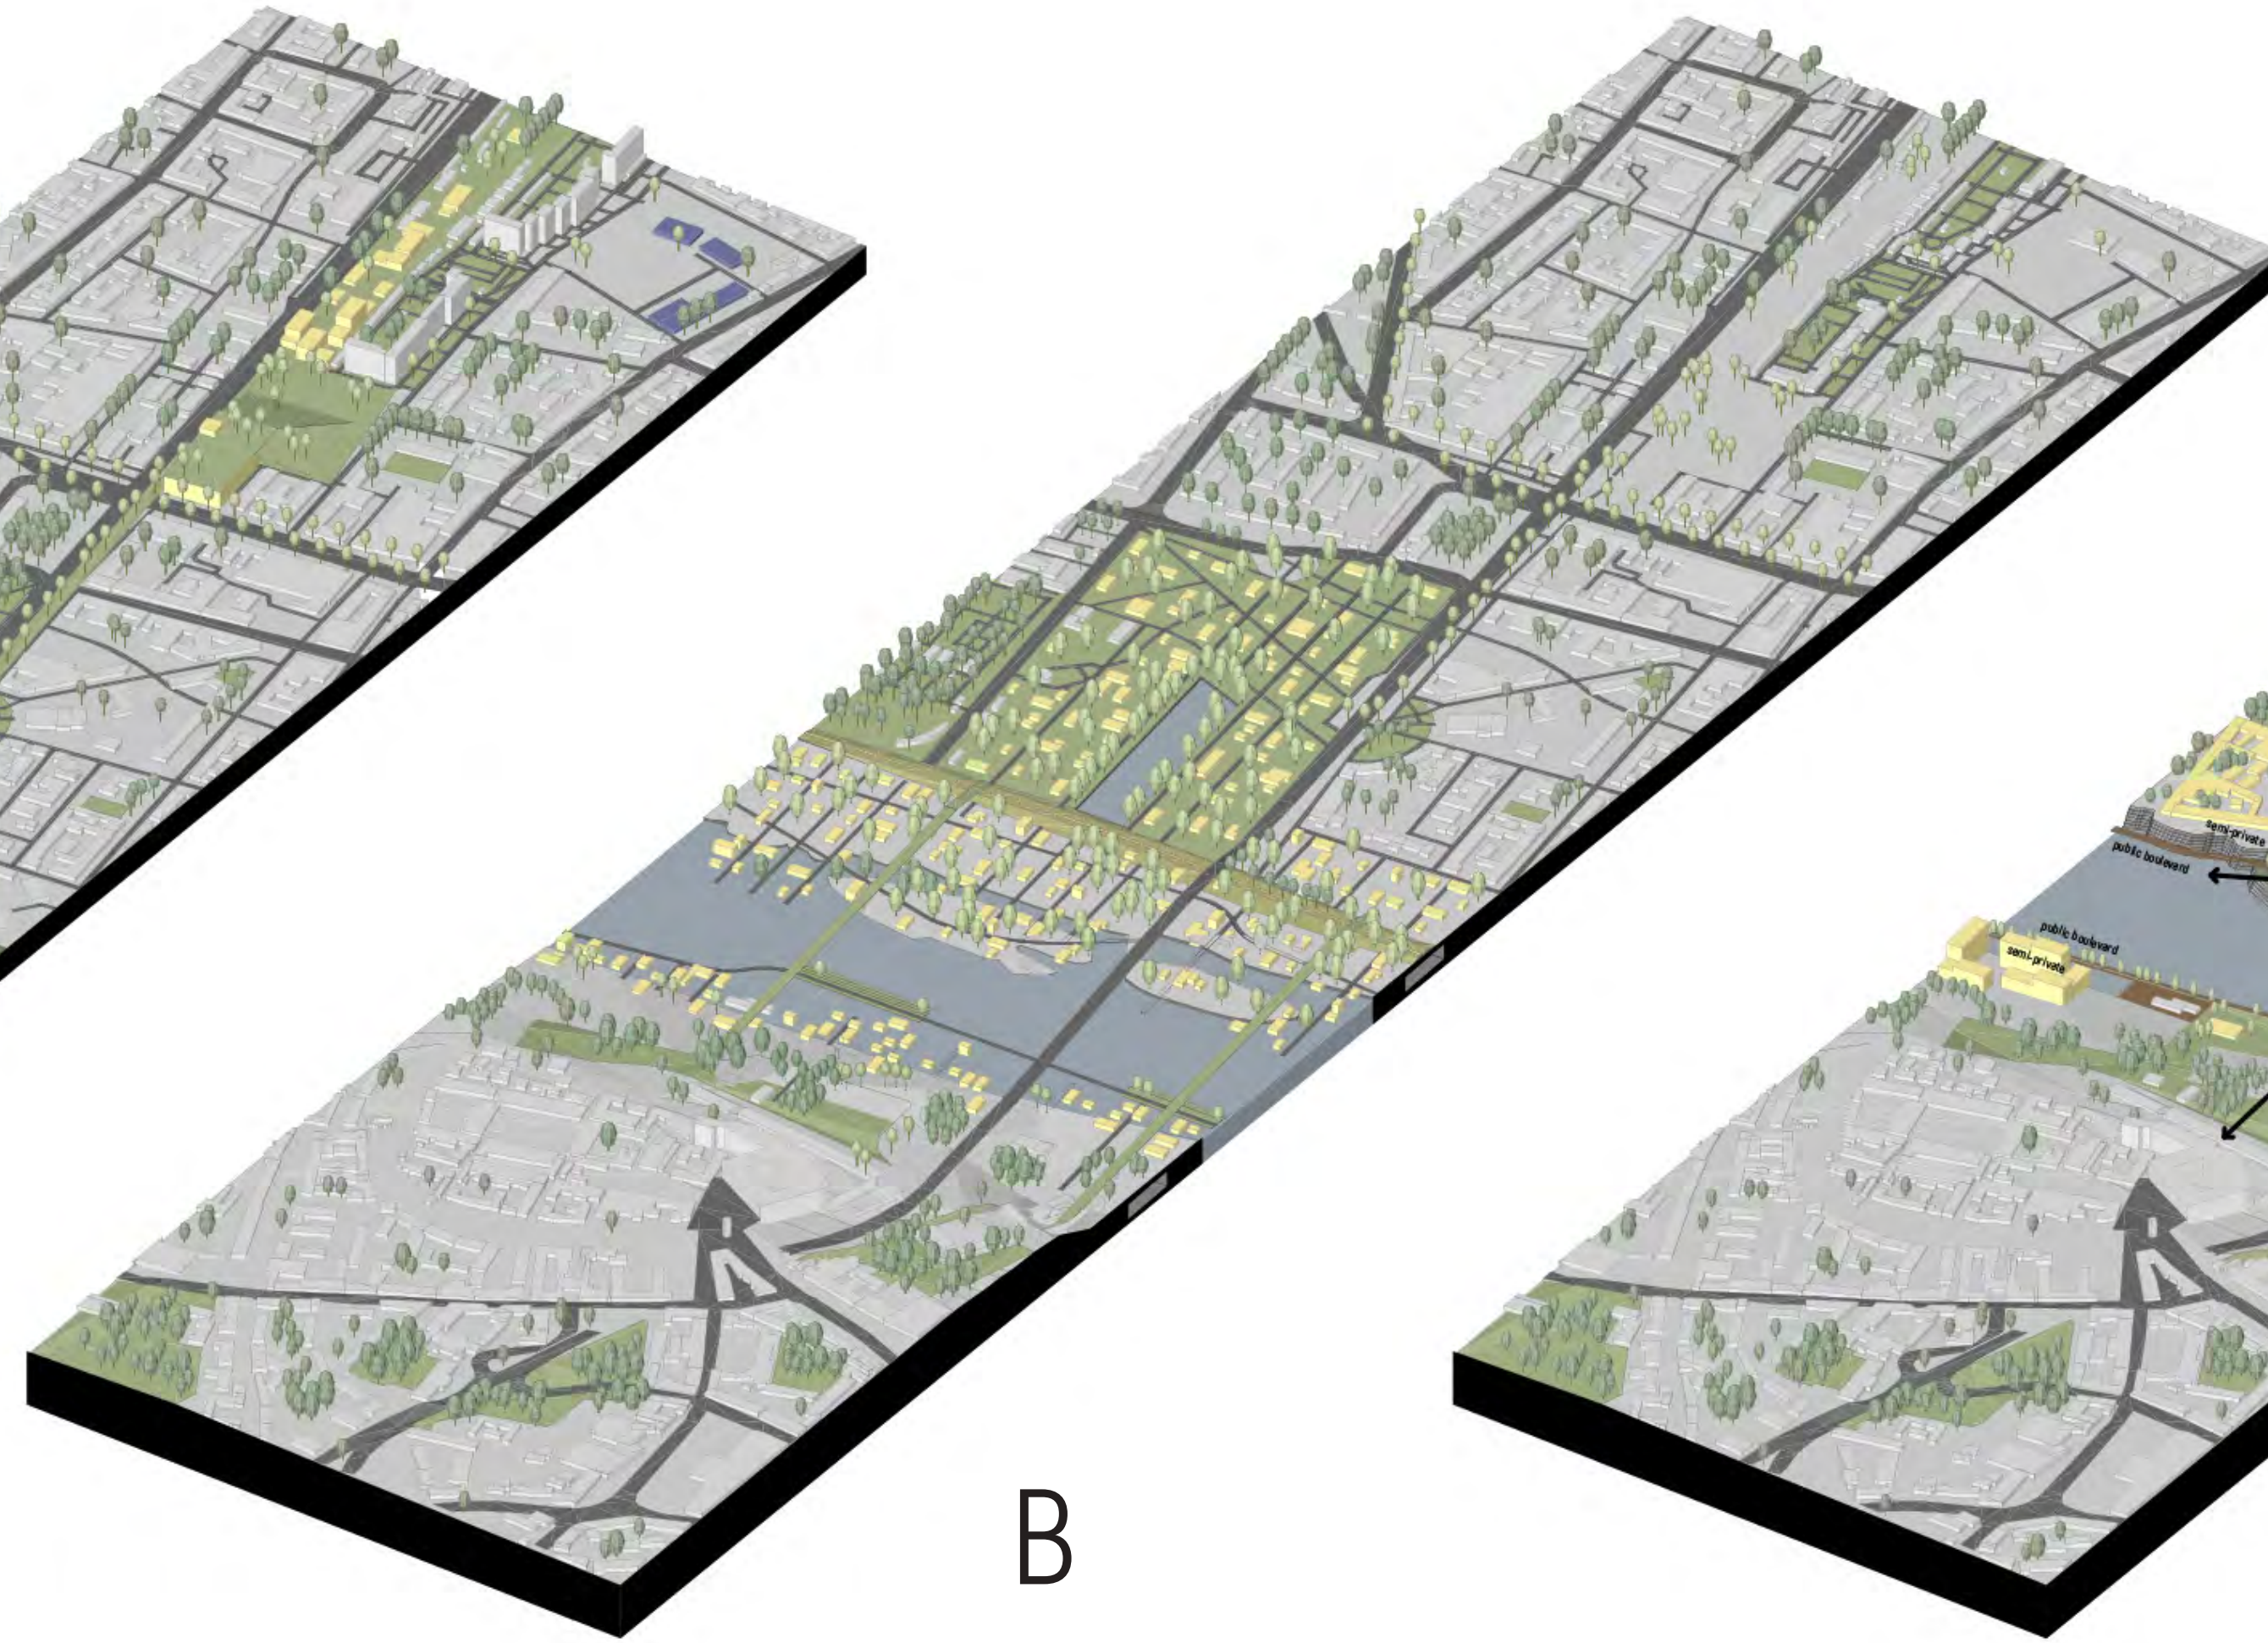

location : center

three principles : A - **linear urban nature** B - **relation to history** C - **alternate access for red and green**

A

B

C

location : south

three principles : A - **linear urban nature** B - **relation to history** C - **alternate access for red and green**

THE DESIGN OF THE THREE LOCATIONS BASED ON CHOSEN PRINCIPLES AND INDIVIDUAL CONDITIONS

north 3 km

center 3 km

south 6 km

- river
- green
- rail track
- street
- bike lane
- ecological corridor
- dike with car tunnel
- existing buildings
- designed buildings
- protected heritage

THREE DIFFERENT ZONES - THREE DIFFERENT DESIGN PRINCIPLES

north : connect & dense

The plan focuses on **reduction of exiting barriers [E]** that go mostly parallel to the river. These barriers are: roads, train track, fenced garden plots or inaccessible areas filled with bushes.

By looking from different perspective, the location has **full of potential [D]** for creating a new urban development and giving space for nature.

Today, the residents living in the Pelcowizna district, located on the east part of the river, complain of not having an access both to the river and to the public transport. They want to **feel as a part of the city [C]** and yet they must fight with mentioned obstacles everyday.

The river and the ridge can become a desirable site for leisure and recreation. They can be a city **connector instead of a barrier [B]**. The new, needed bridges might have not only function to bring people from point a to b but also offer a **place to meet [B]**, to carry green and connect it with separated ecological reserviotes. The islands might also have a connecting role. They don't disturb the natural **landscape to stay untouched [A]**, yet they bring an opportunity to live in a great environment.

The district is reduced by lots of cars and infrastructure that is often hidden underground. A big challenge but future possible. This process already has started in the central part and will be continued.

This site, located so close to the heart of the city might become a **new hub for living, working, recreating [C,D]**. It can become a full media local center that **keeps inhabitants stay** there and invite others. All this with a respect for existing heritage that is left by the history.

center : connect & protect

The central part has already lots of qualities. Located on the west part of the river, the **Old Town [A]**, is protected by **UNESCO**. It has magnificent Castle, reconstructed net of streets, squares and houses. This site is full of tourists because of its beautiful architecture, cosy space, lots of commercial and inviting facilities. Still, there is a big problem concerning the lack of connection the Castle with the river. The existing street inbetween is a huge barrier. The Castle gardens are fenced and the only way to visit them, is to buy a ticket to enter the Castle. The area should be open and accessible for all. A park could be a great solution, also to bring the natural character of the river to the heart of the city.

The other site of the river is Praga district. The place of the **worst reputation [C]**. People living there, often don't have an access to the basic media like central warming or sanitary systems. The river divides these extremes drastically. The **gentrification [C]** process has started. Its postivies, as well as negatives, are being seen alreday for few years. Investors do not hesitate in demolishing the old buildings or or resettling poor residents.

The plan focuses firstly on a **protection [C]** the old Praga houses, then on **connection [B]** the two parts of the river and the Caste. The social stratification might be reduced here by many spatial and programmatic solutions.

south : connect & create

In the south section, the **ridge [A]** and the **river [C]** **relation disappears**. The distance between the two landscape elements reaches more than 5 km.

Yet, they might have lots in common in terms of a similar linearity, use and character. In between, there is a big potential to create a **new urban center [B]** with housing and working possibilities. Thanks to this act, we can keep the ridge and the river **free from occupation [A,C]**.

The new hub has a part of a new river branch that brings lots of qualities for the users.

WHAT

Sequence of the first actions

1. Defining the red lines along the ridge and the river

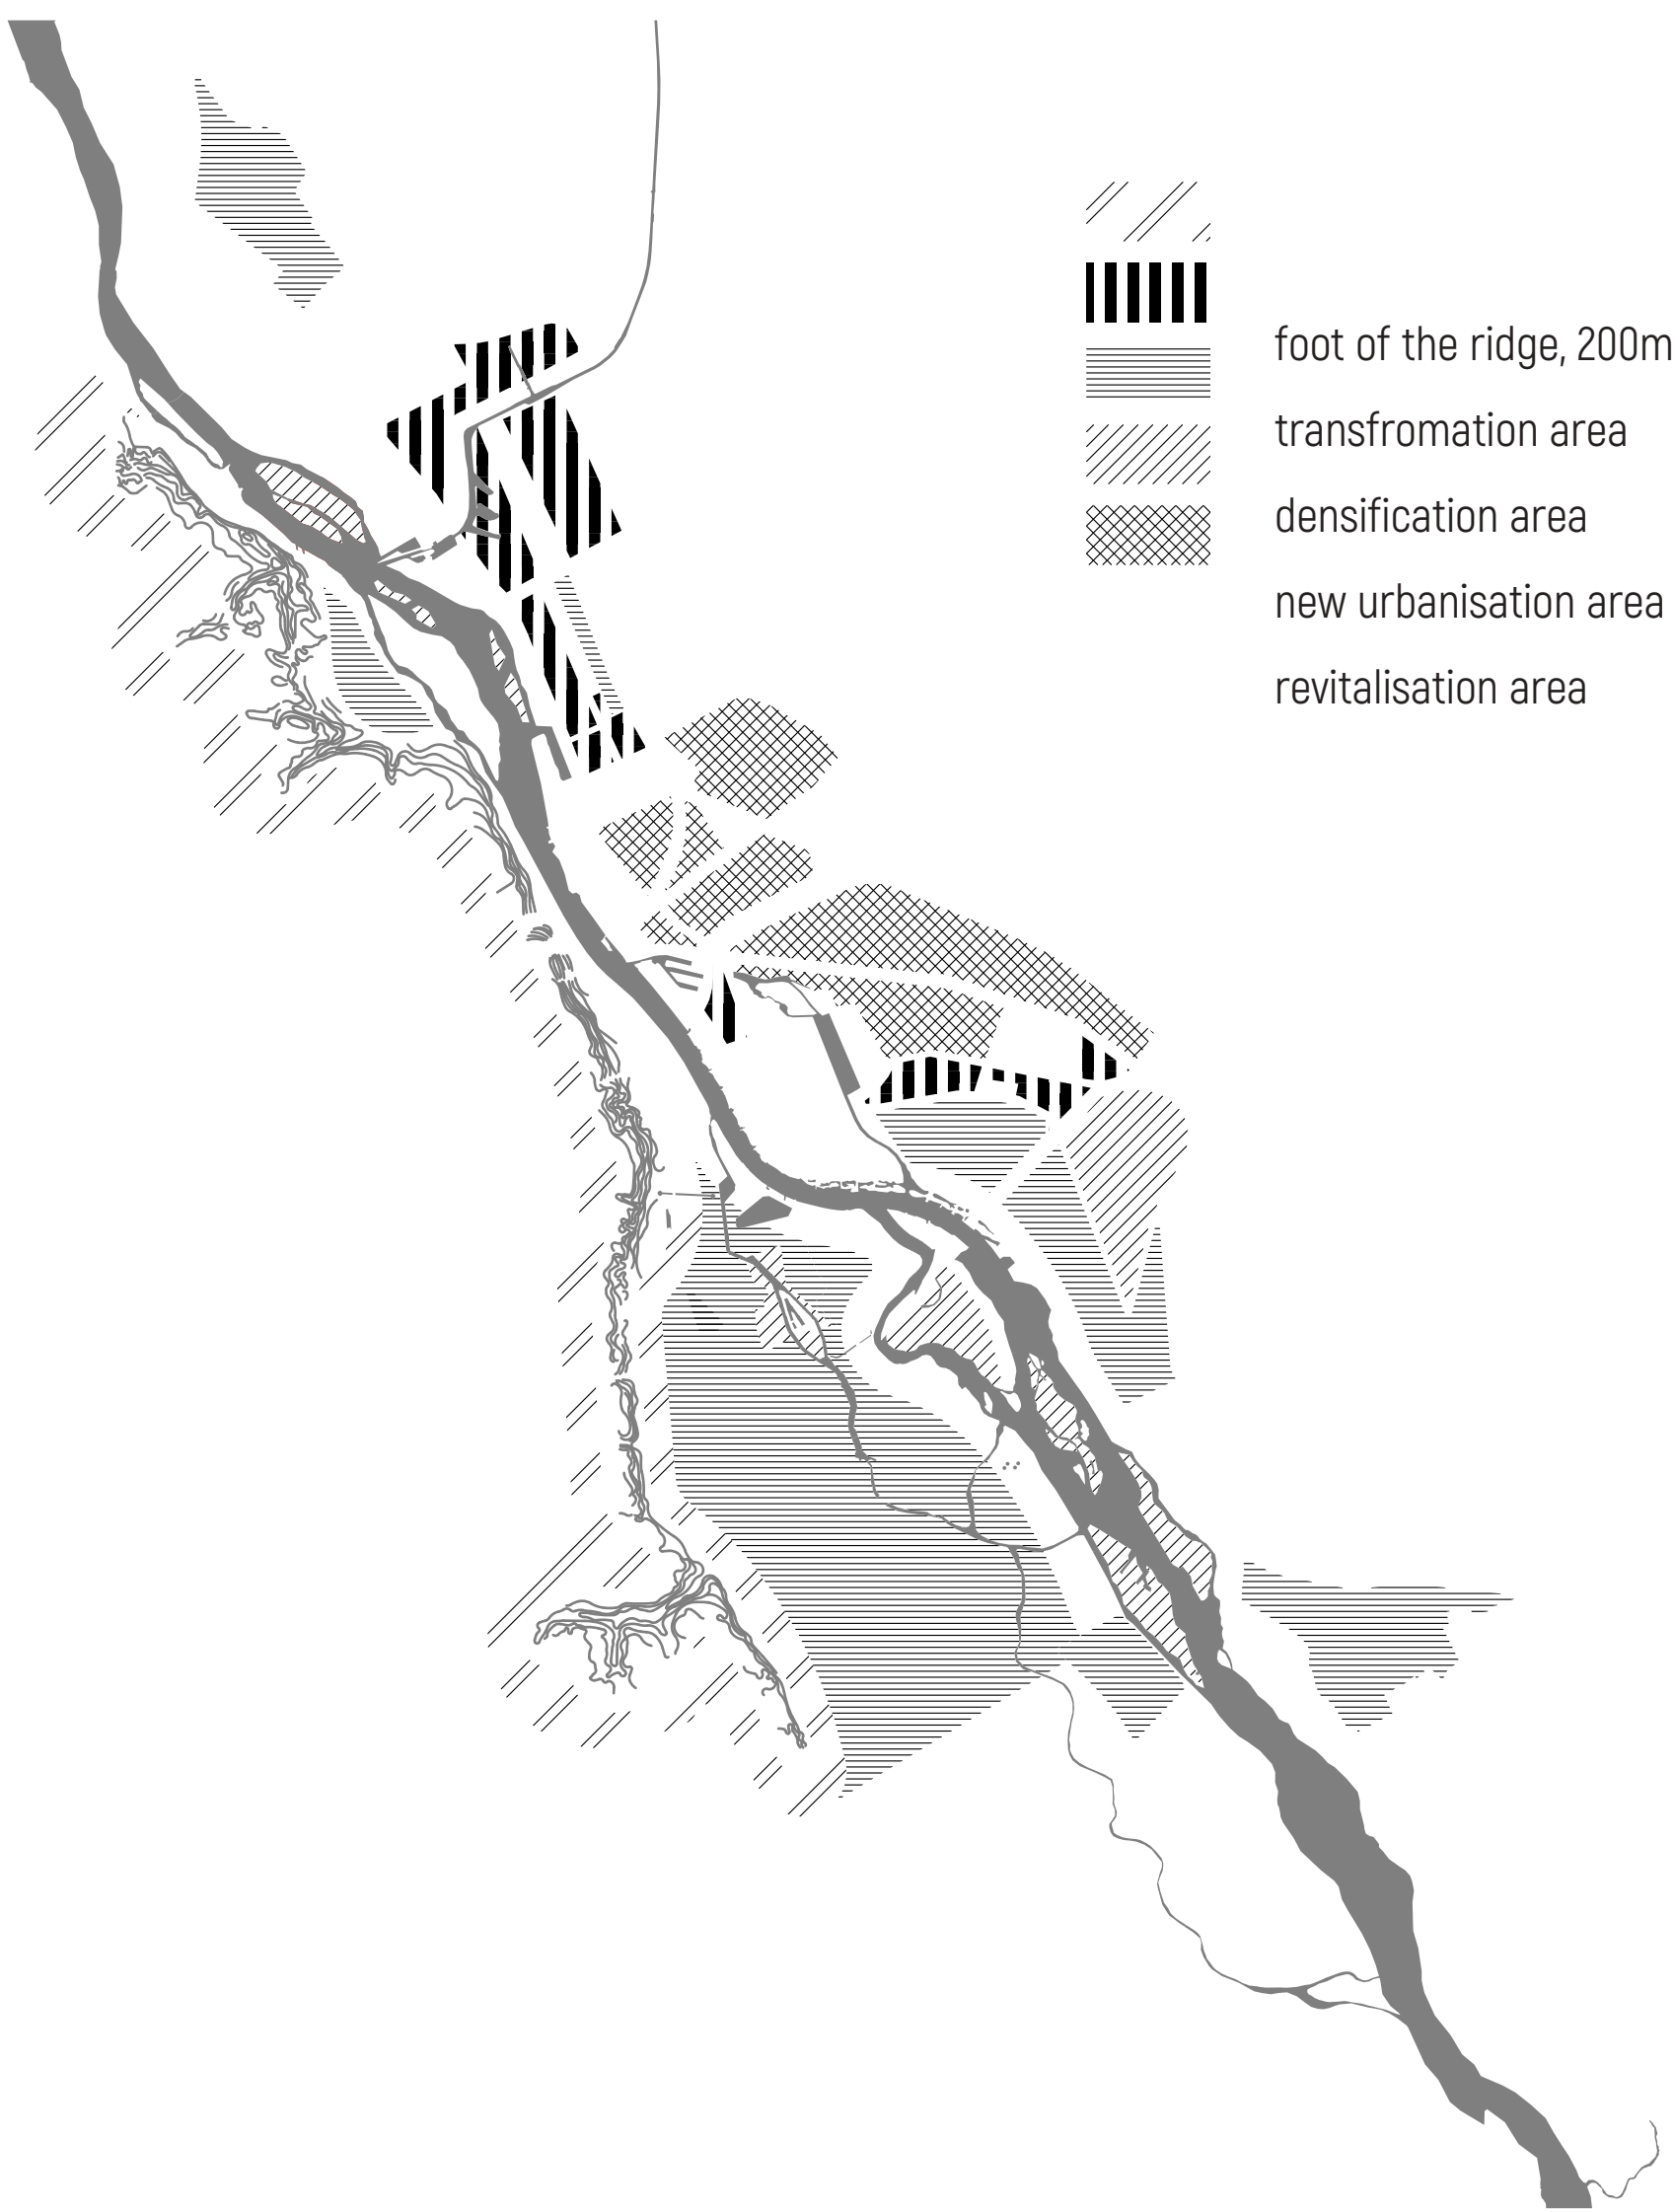

- Ridge:
- **50m** from the foot of the ridge
- River:
- **300m** from the mainstream edge, except:
 - a) islands
 - b) ports
 - c) canals
 - d) water storage basins
 - e) existing built areas that might be densified

2. Defining the types of the river edges

So far, the central western part of the river of 6km has been characterized by hard, urban edges. The project focuses on the reduction of infrastructure in this zone and creation of a park between the Old Town and the river. The central eastern side stays natural, with an exception of the port area. The rest of the river edges have natural form. The transition is smooth. The exception are the urbanized islands, that edges can be both hard and soft. All the sites of the river are dedicated for nature and public use, offering sport, recreation and leisure facilities. They are free from urbanisation, except of light, temporary structures that are prepared for basic need facilities, like toilets, small cafes, covered rooms offering places to rest or shelter from bad weather, service and rent of sport equipment.

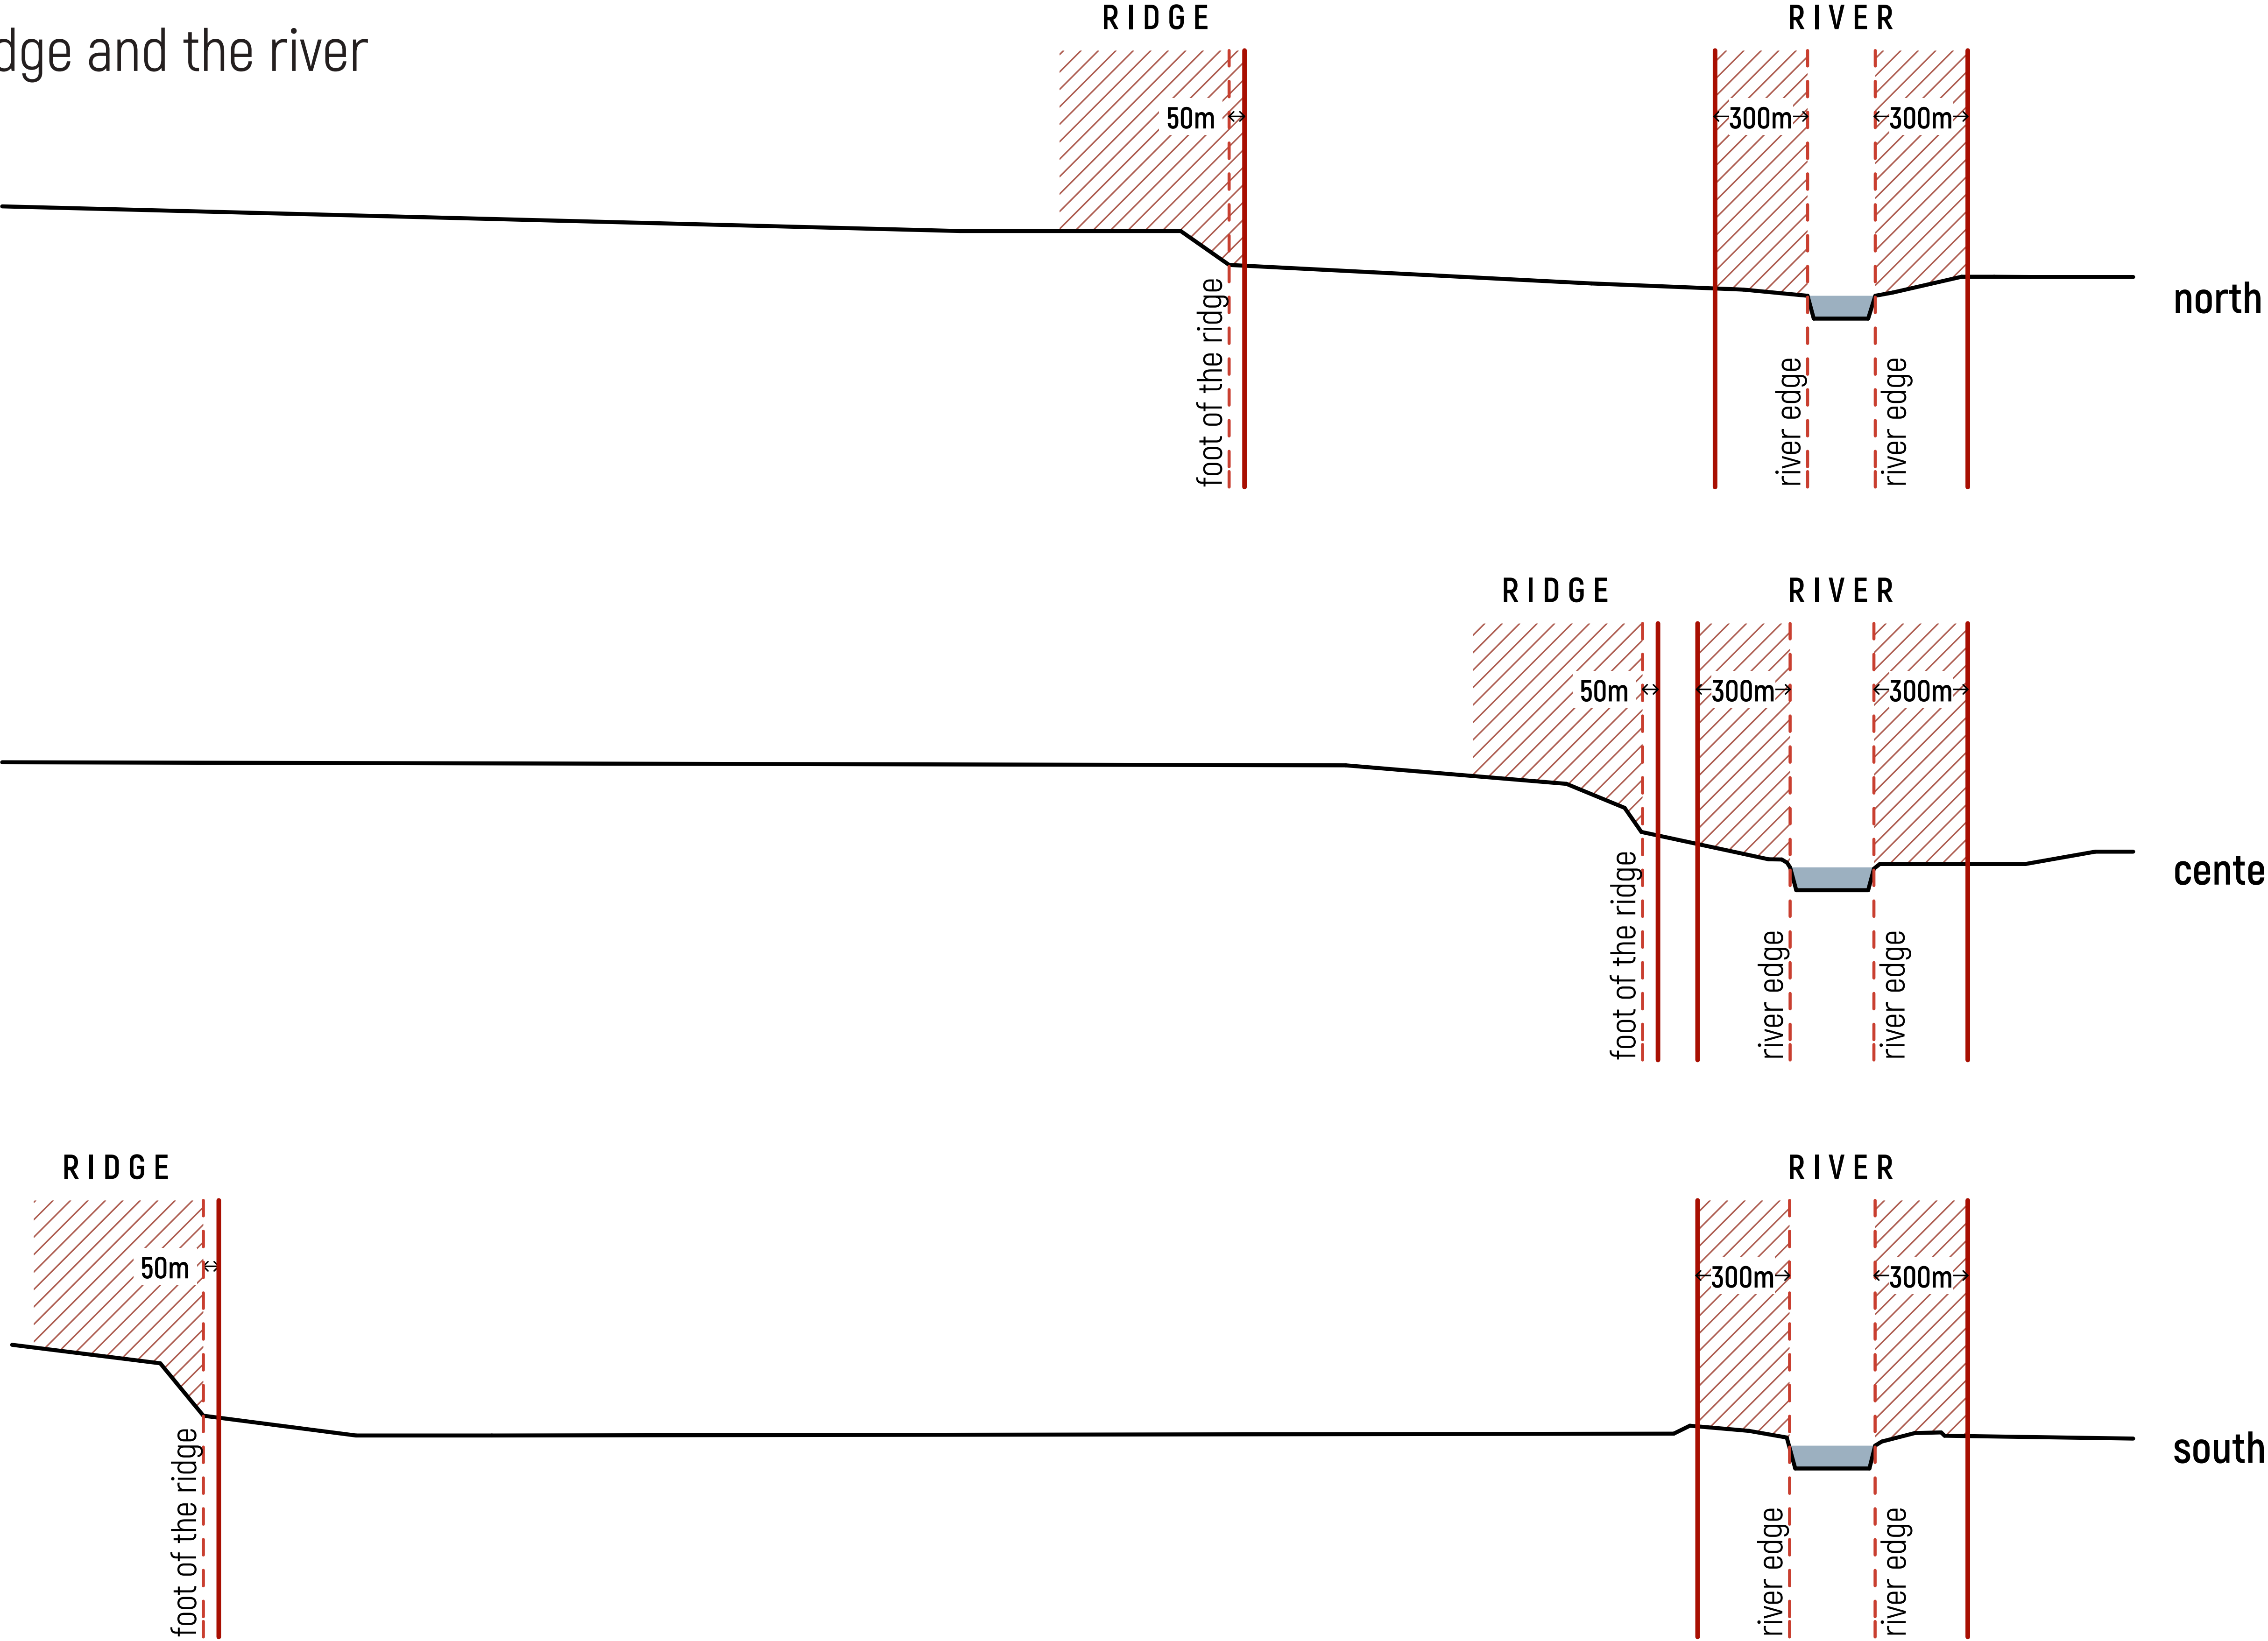

3. Defining the rules regarding the height of the buildings in urbanised areas

- urbanised islands
 - foot of the ridge 200m
 - behind 200m from the ridge and 400m from the river
 - areas of densification
 - areas of transformation
 - areas of revitalisation
- max. **20m**
max. **12m**

max. **80m**
max. **12m**
max. **80m**
max. **15m**

1. Defining the red lines
along the ridge and the river

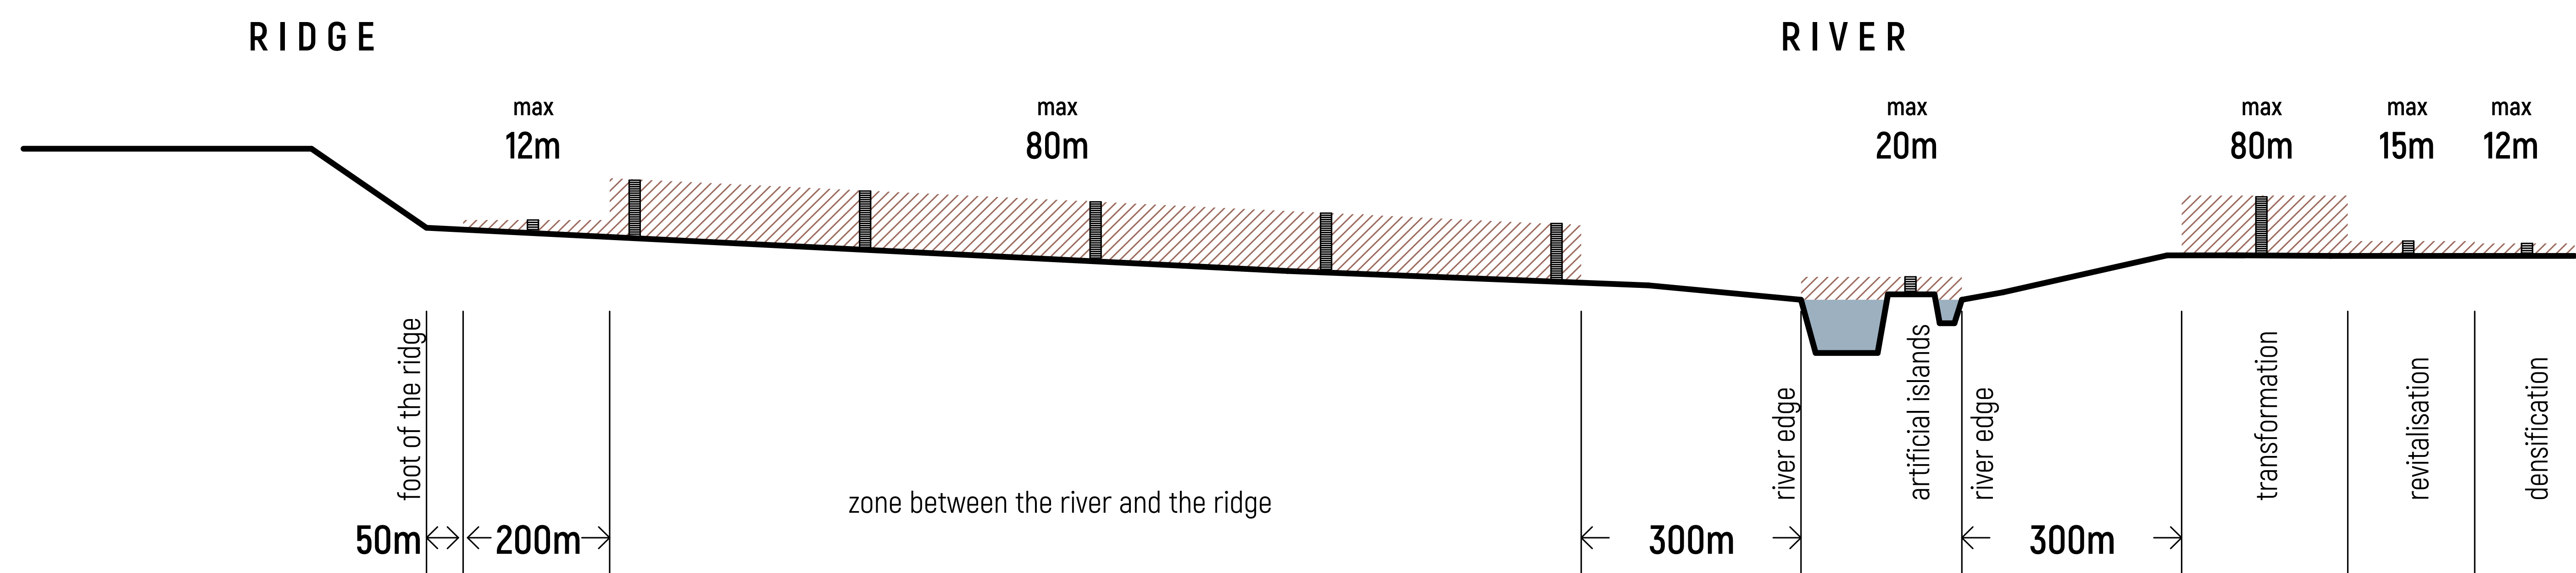

prohibition area for building with the exception of islands area, existing ports, canals, water storages, existing built areas. The only possible built structures that can be realised are toilets, small cafe's, covered rooms offering places to rest or hide from bad weather, service, rent sport equipment etc.

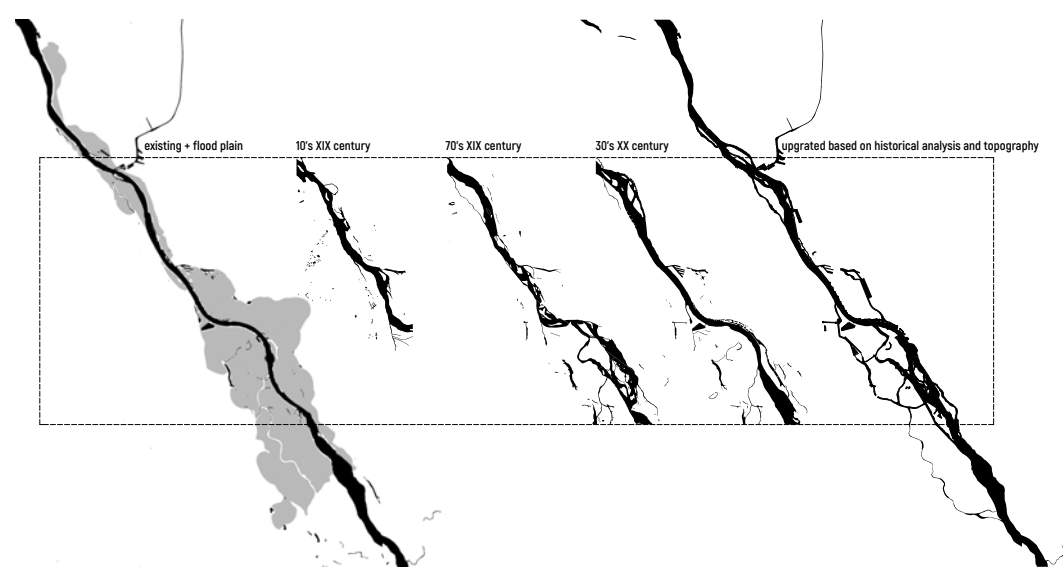

2. Defining the types of the river edges

3. Defining the rules regarding the height of the buildings in urbanised areas

WE MAKE STUDIUM !

STUDIUM

a scenario for the city that is a base to create local plans. The new document will be finished in 2.5 years. The latest version was made in 2006 and is no longer valid. The main goals of the STUDIUM are processes that stop the urban sprawl, climate change and participation.

CITY VISION & STUDIUM

WHO MAKES STUDIUM AND IN WHAT STAGES [Polish vs Dutch model]

CITY VISION 2030

Applies to all sectors:
economy, health, education etc.

It describes what city is to be

STUDIUM

Applies to space

It is a study of conditions
and directions of spatial
development of the capital city
of Warsaw (suikzp)

has to be relevant

PARADOX

The Studium is not yet a normative act.

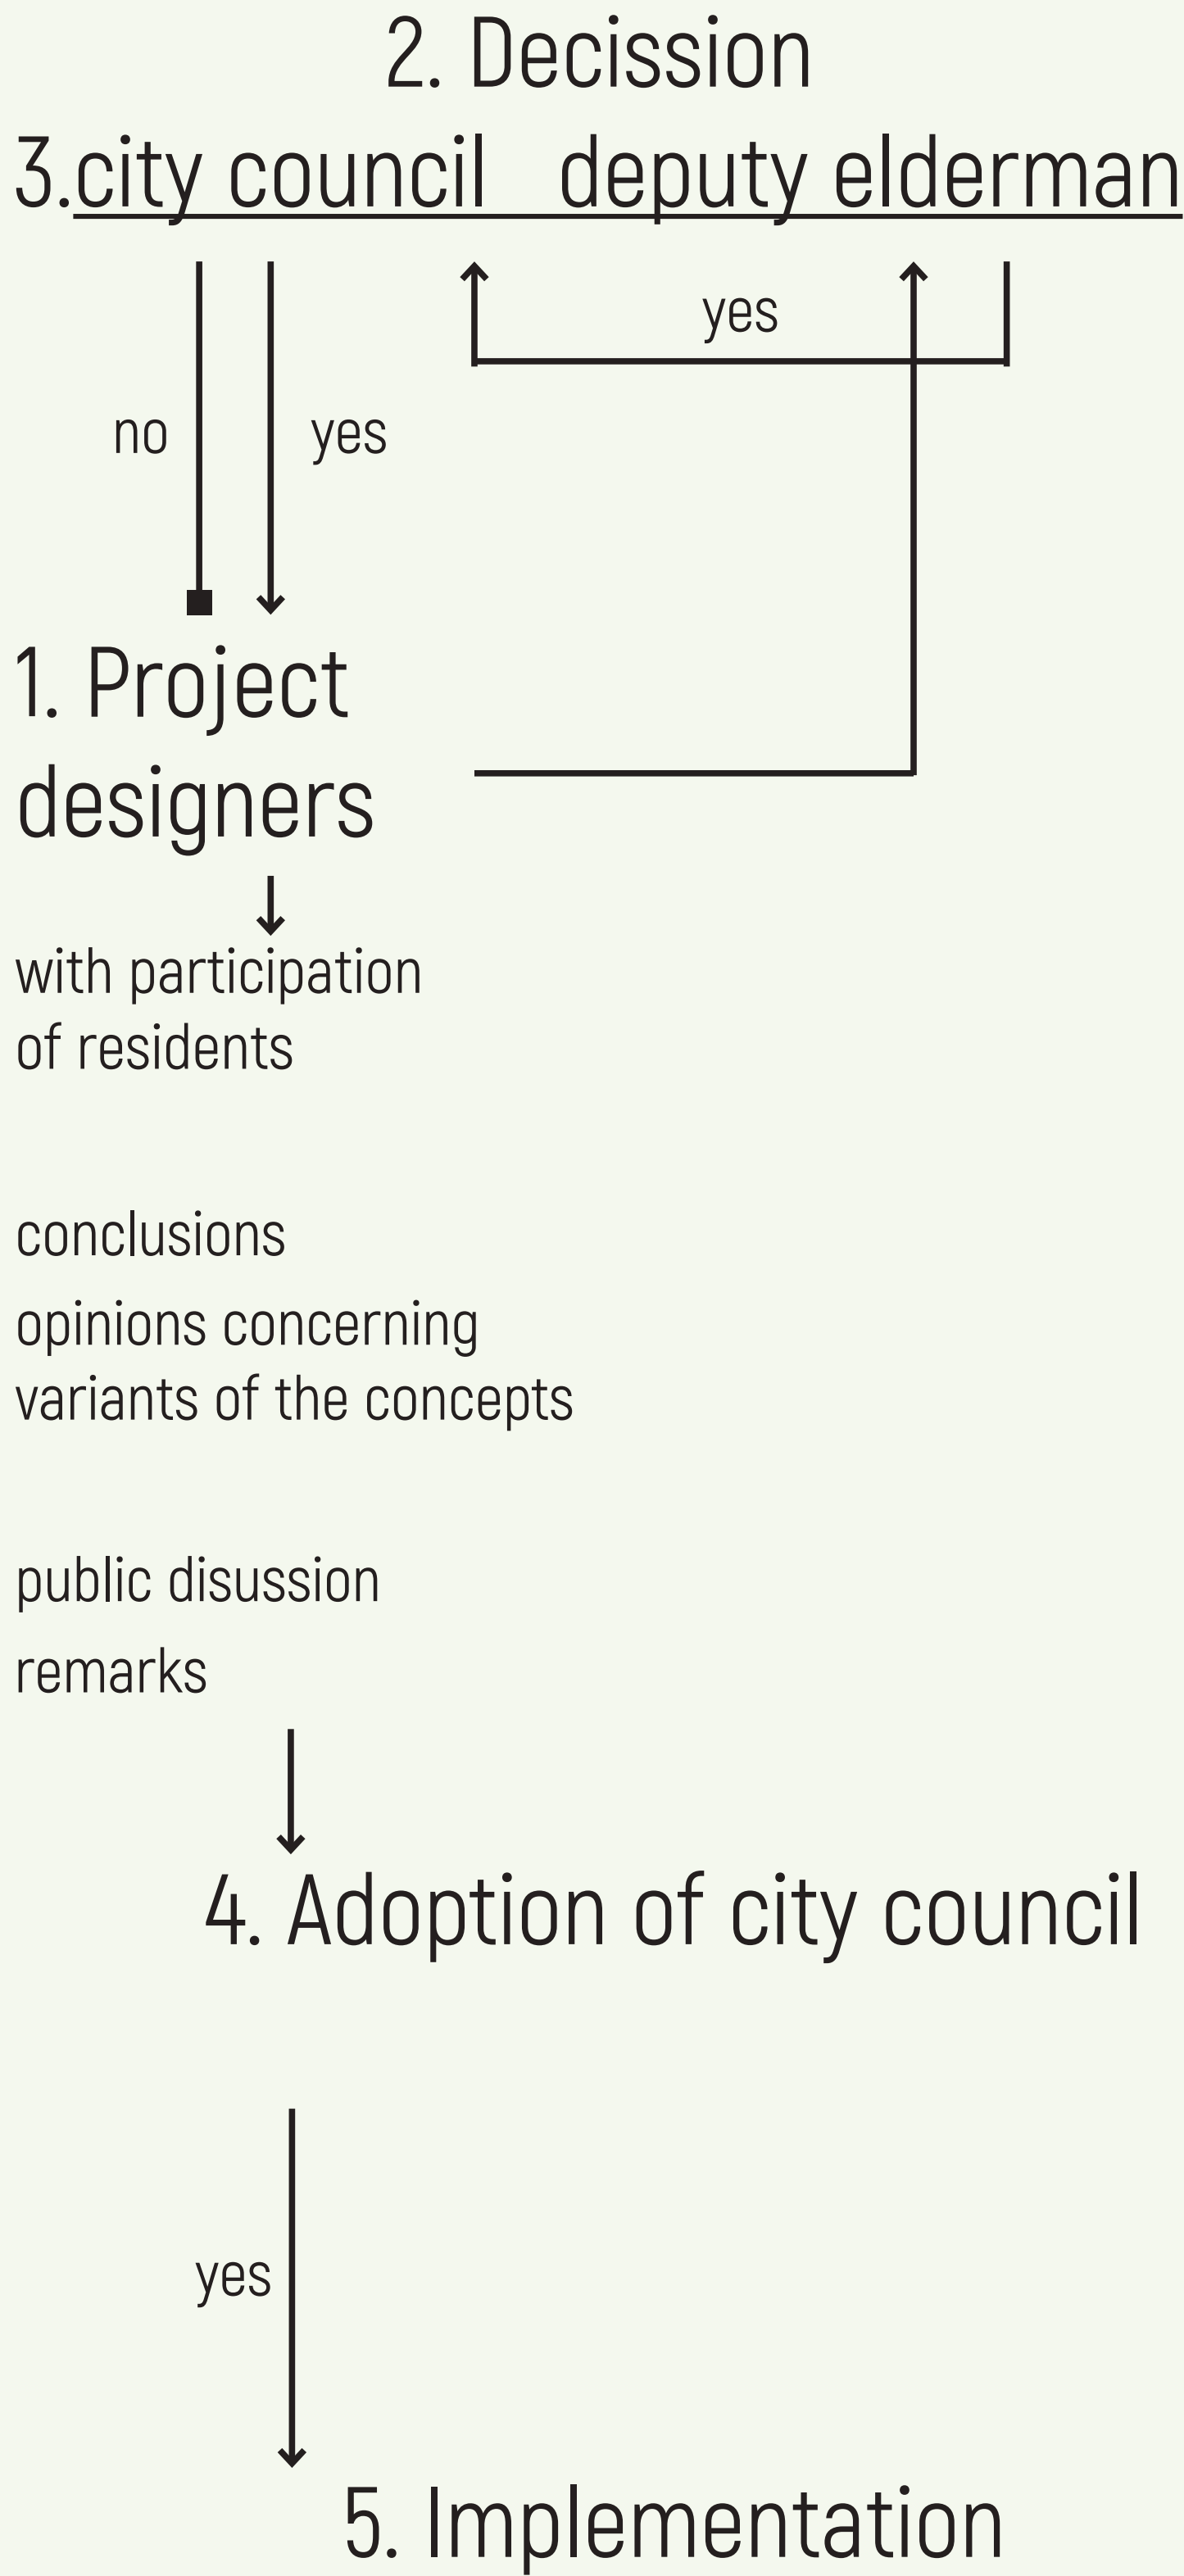

The local plan must be relevant with
the Studium. The building permits are
issued only on the basis of local plans
but also in the absence of a plan based
on a decision on development condi-
tions. The effect of this is that invest-
ments based on building conditions
do not have to be compatible with the
Studium.

However, we are awaiting changes in
the law regarding the urban and con-
struction code.

PL

WHO

AN EXAMPLE OF COOPERATING ACTORS ON THE PELCOWIZNA PROJECT

persons and institutions directly connected with the Pelcowizna project

persons and institutions not directly related to the Pelcowizna project, although working on similar purposes of other locations or in the scale of the city

PELCOWIZNA PROJECT - legislative possibilities and approaches of involved actors

consultation with the activist

Mrs. Karolina Krajewska's house

new headquarters
for social consultations

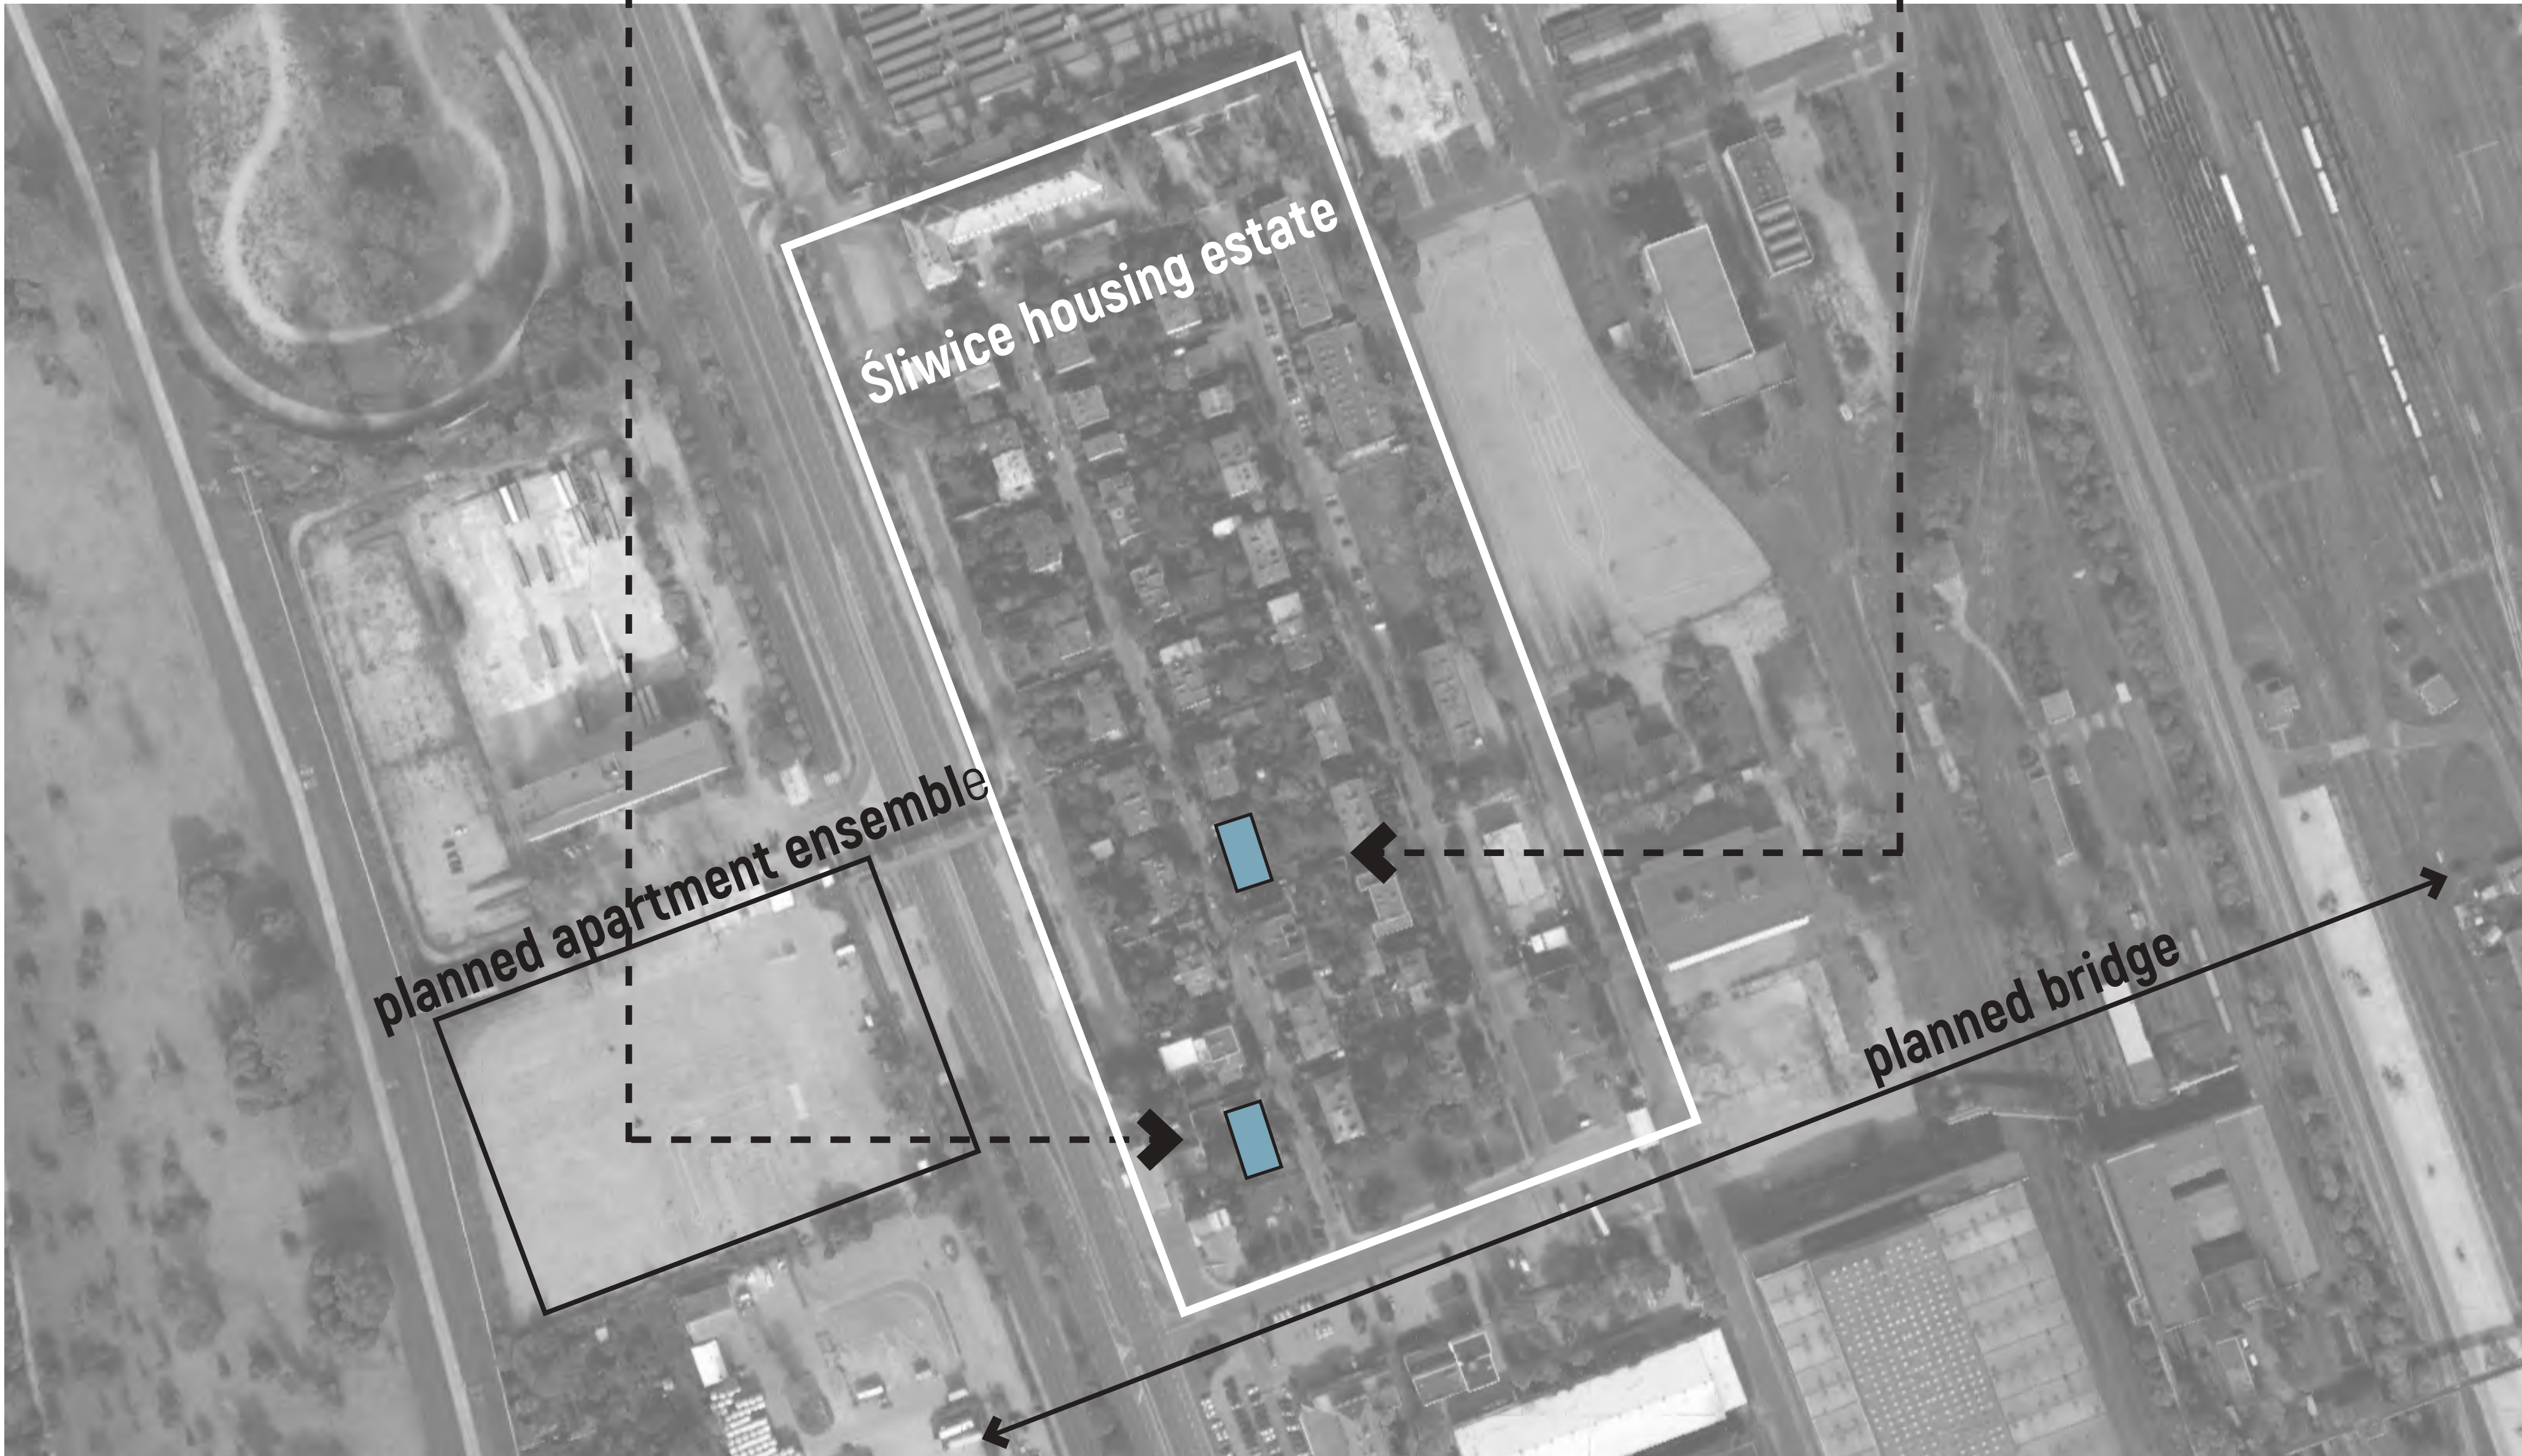

The first action on the small scale.
Example: Śliwice housing estate

Mrs. Karolina Krajewska believes that first thing to do is to convince the councilors, because their decisions are not directed enough information.

During the conversation, I learned that in the region of the focus location there are **convergent interests** not only between government institutions and residents but between residents of different settlements.

Mrs. Krajewska is **fighting against building a housing estate on the Vistula river** or a **planned bridge** next to her home. The biggest problems in this location are the **lack of access to the river and public transport**.

The designed plan shown was pleasing to Mrs. Krajewska, who thanked for the interest in this small housing estate. However, the small amount of people living in this district, will reach thousands in few years.

consultation with city official

Recently, Mr. Dariusz Bartoszewicz wrote a book about the Vistula river (printed in December 2018), therefore was enthousiastic about the idea of highlighting the river and the ridge in the plan.

The principles are very much similar to those that he and his co-workers are forcing.

I asked about the starting point of the design location and learned that the most important issue is the social awarness about the city and its plans.

In terms of the space, we agreed that when it comes to the design, first we need to demolish the barriers, especially located along the streets and railways. Create a new network of streets and stop the process of repeating the development that alreday has started next to the river. Very importnat is to create a place for locals that have conflicts of interests (example, the bridge next to Śliwice that people from Bródno want).

We need to invest in creation of the vision so the city stops being scattered and undercontrolled.

THE NEW LOCATION FOR THE PUBLIC CONSULTATION

ZODIAK
opened in December 2018 pavilion for consultation concerning the city matters.
Dedicated for decission makers, architects, urbanists and citizens.
Everyone can participate in workshops, lectures and discussions.

Zodiak is located in heart of Warsaw, next to the Palace of Culture and Science.
This is one of the most transparent and opened buidling for multidisciplinary thinking and doing.

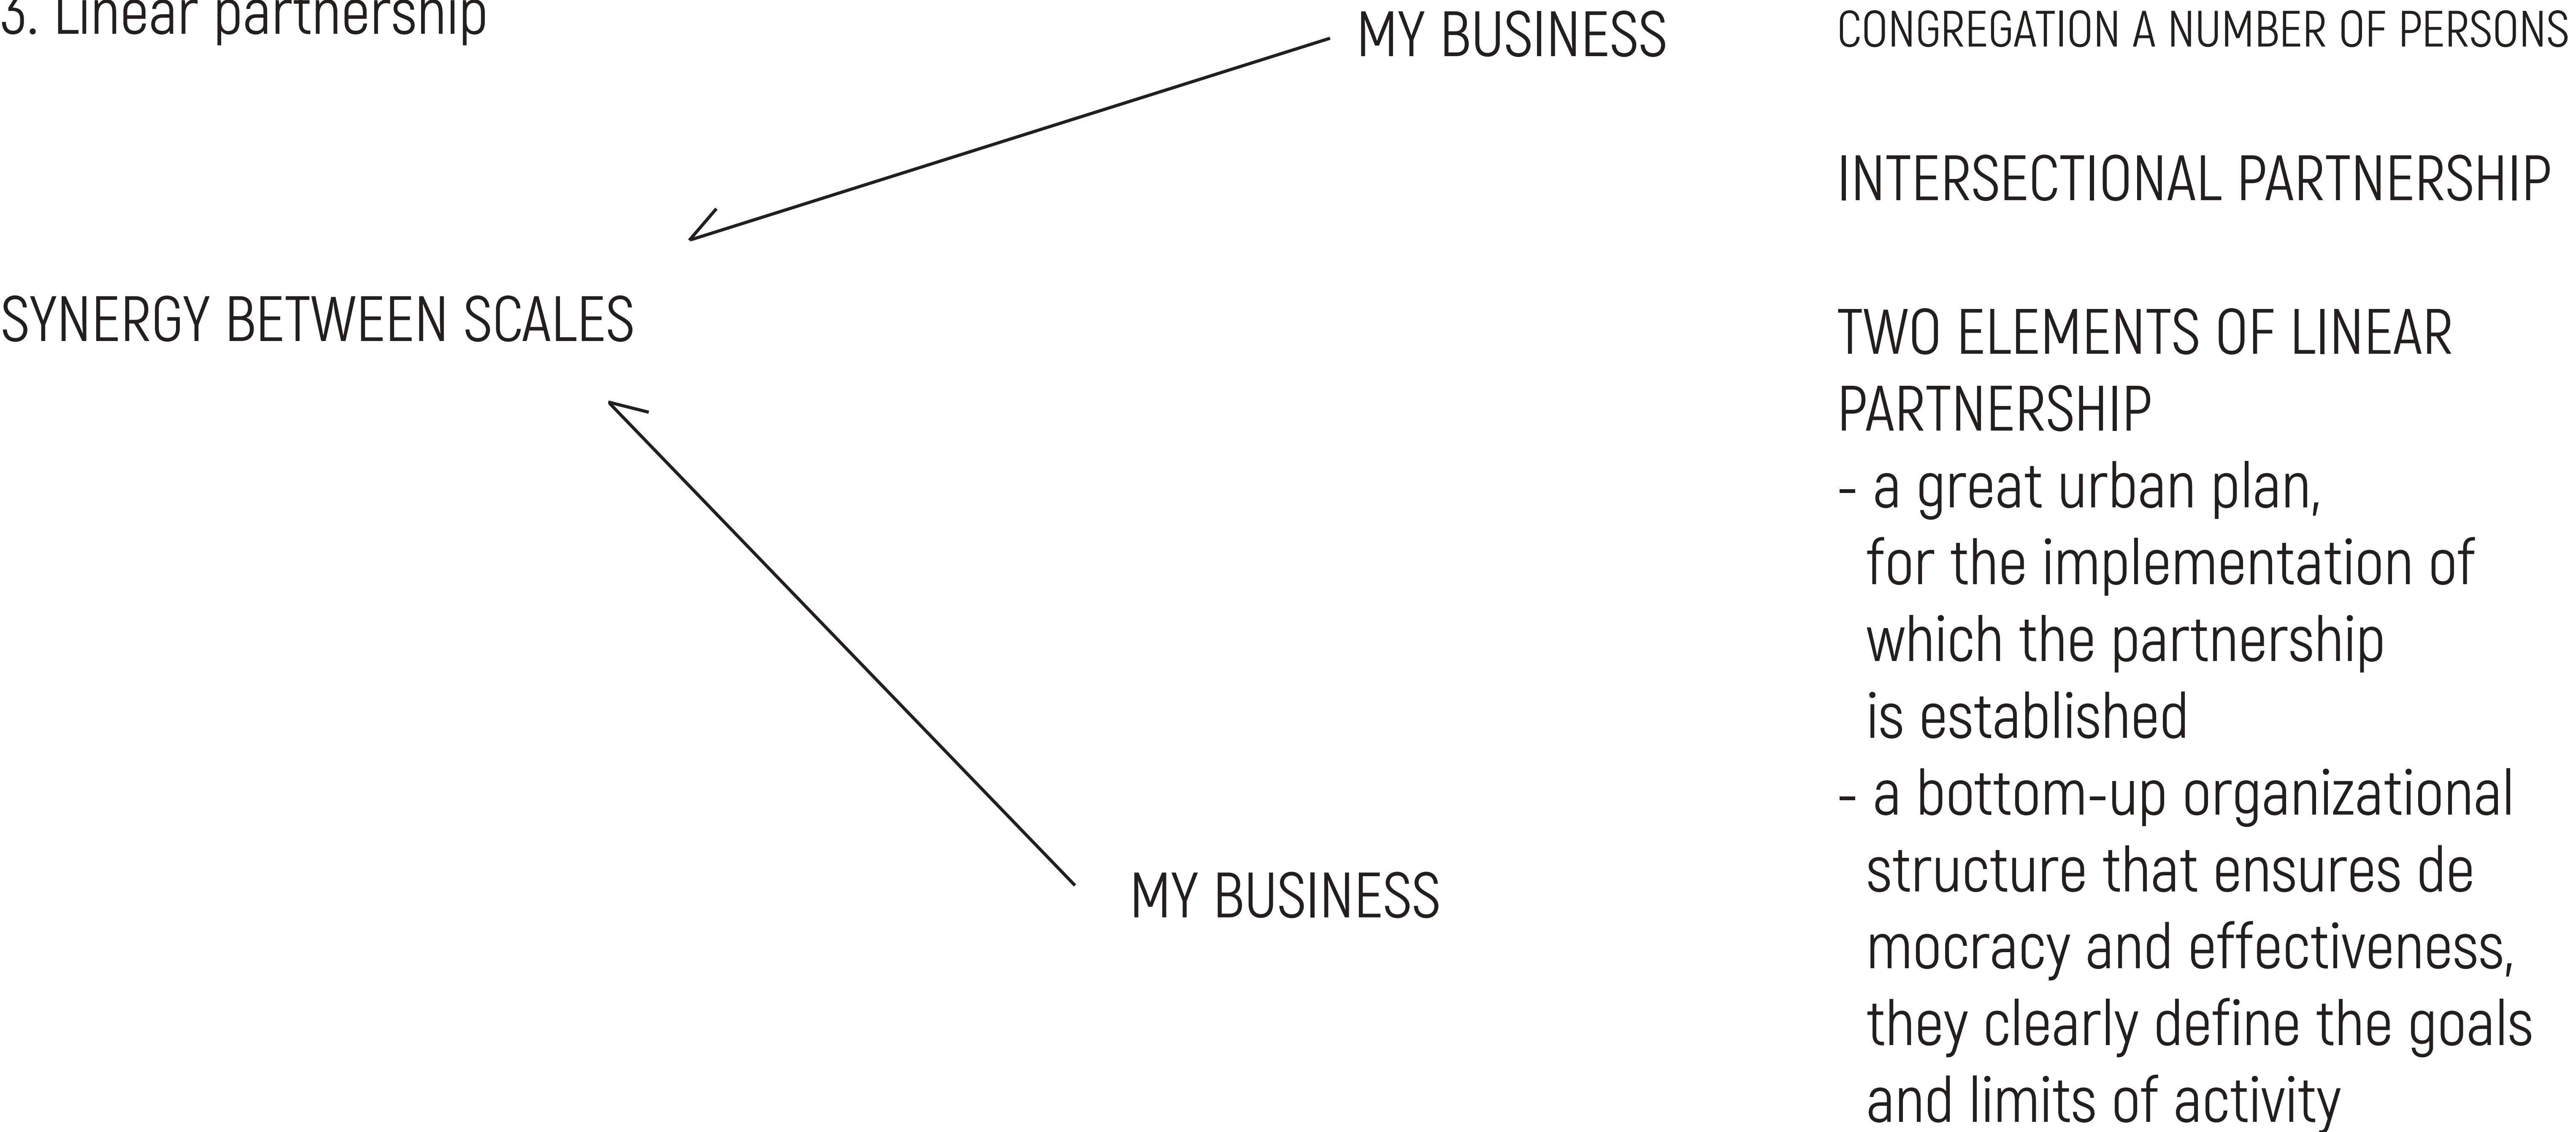

Should we make the constellation of the stars?

HOW

BY LEGALIZING THE STUDIUM AND INRODUCING A LINEAR PARTNERSHIP

- 1. Local initiatives
- 2. Local partnerships
- 3. Linear partnership

WHAT IS THE LEGACY OF LINEAR PARTNERSHIP ?

authoritarian concept

City should serve the a good life and offer an egalitarian space of freedom, but designing cities is too important task to leave them to citizens.

Platon

Aristotle

Le Corbusier

too totalitarian,
not taking into account local needs

Athens Card - LINEAR PARTNERSHIP and its supporters

Partnership, but with the leaders.
The territorial projects of a large scale should be based on close cooperation between social organizations, even those not having much in common. Therefore, communities should be formed.

Elijah Anderson

Teddy Cruz

Artur Jerzy Filip

civic revolution

We completely reject the central planning model for the resumption of local self-governance and the possibly deep democracy of the planning process.

Jane Jacobs

Henri Lefebvre

can't face the problems of a big scale,
not necessary fair city

Linear partnership scheme

LOCATION MATTERS...

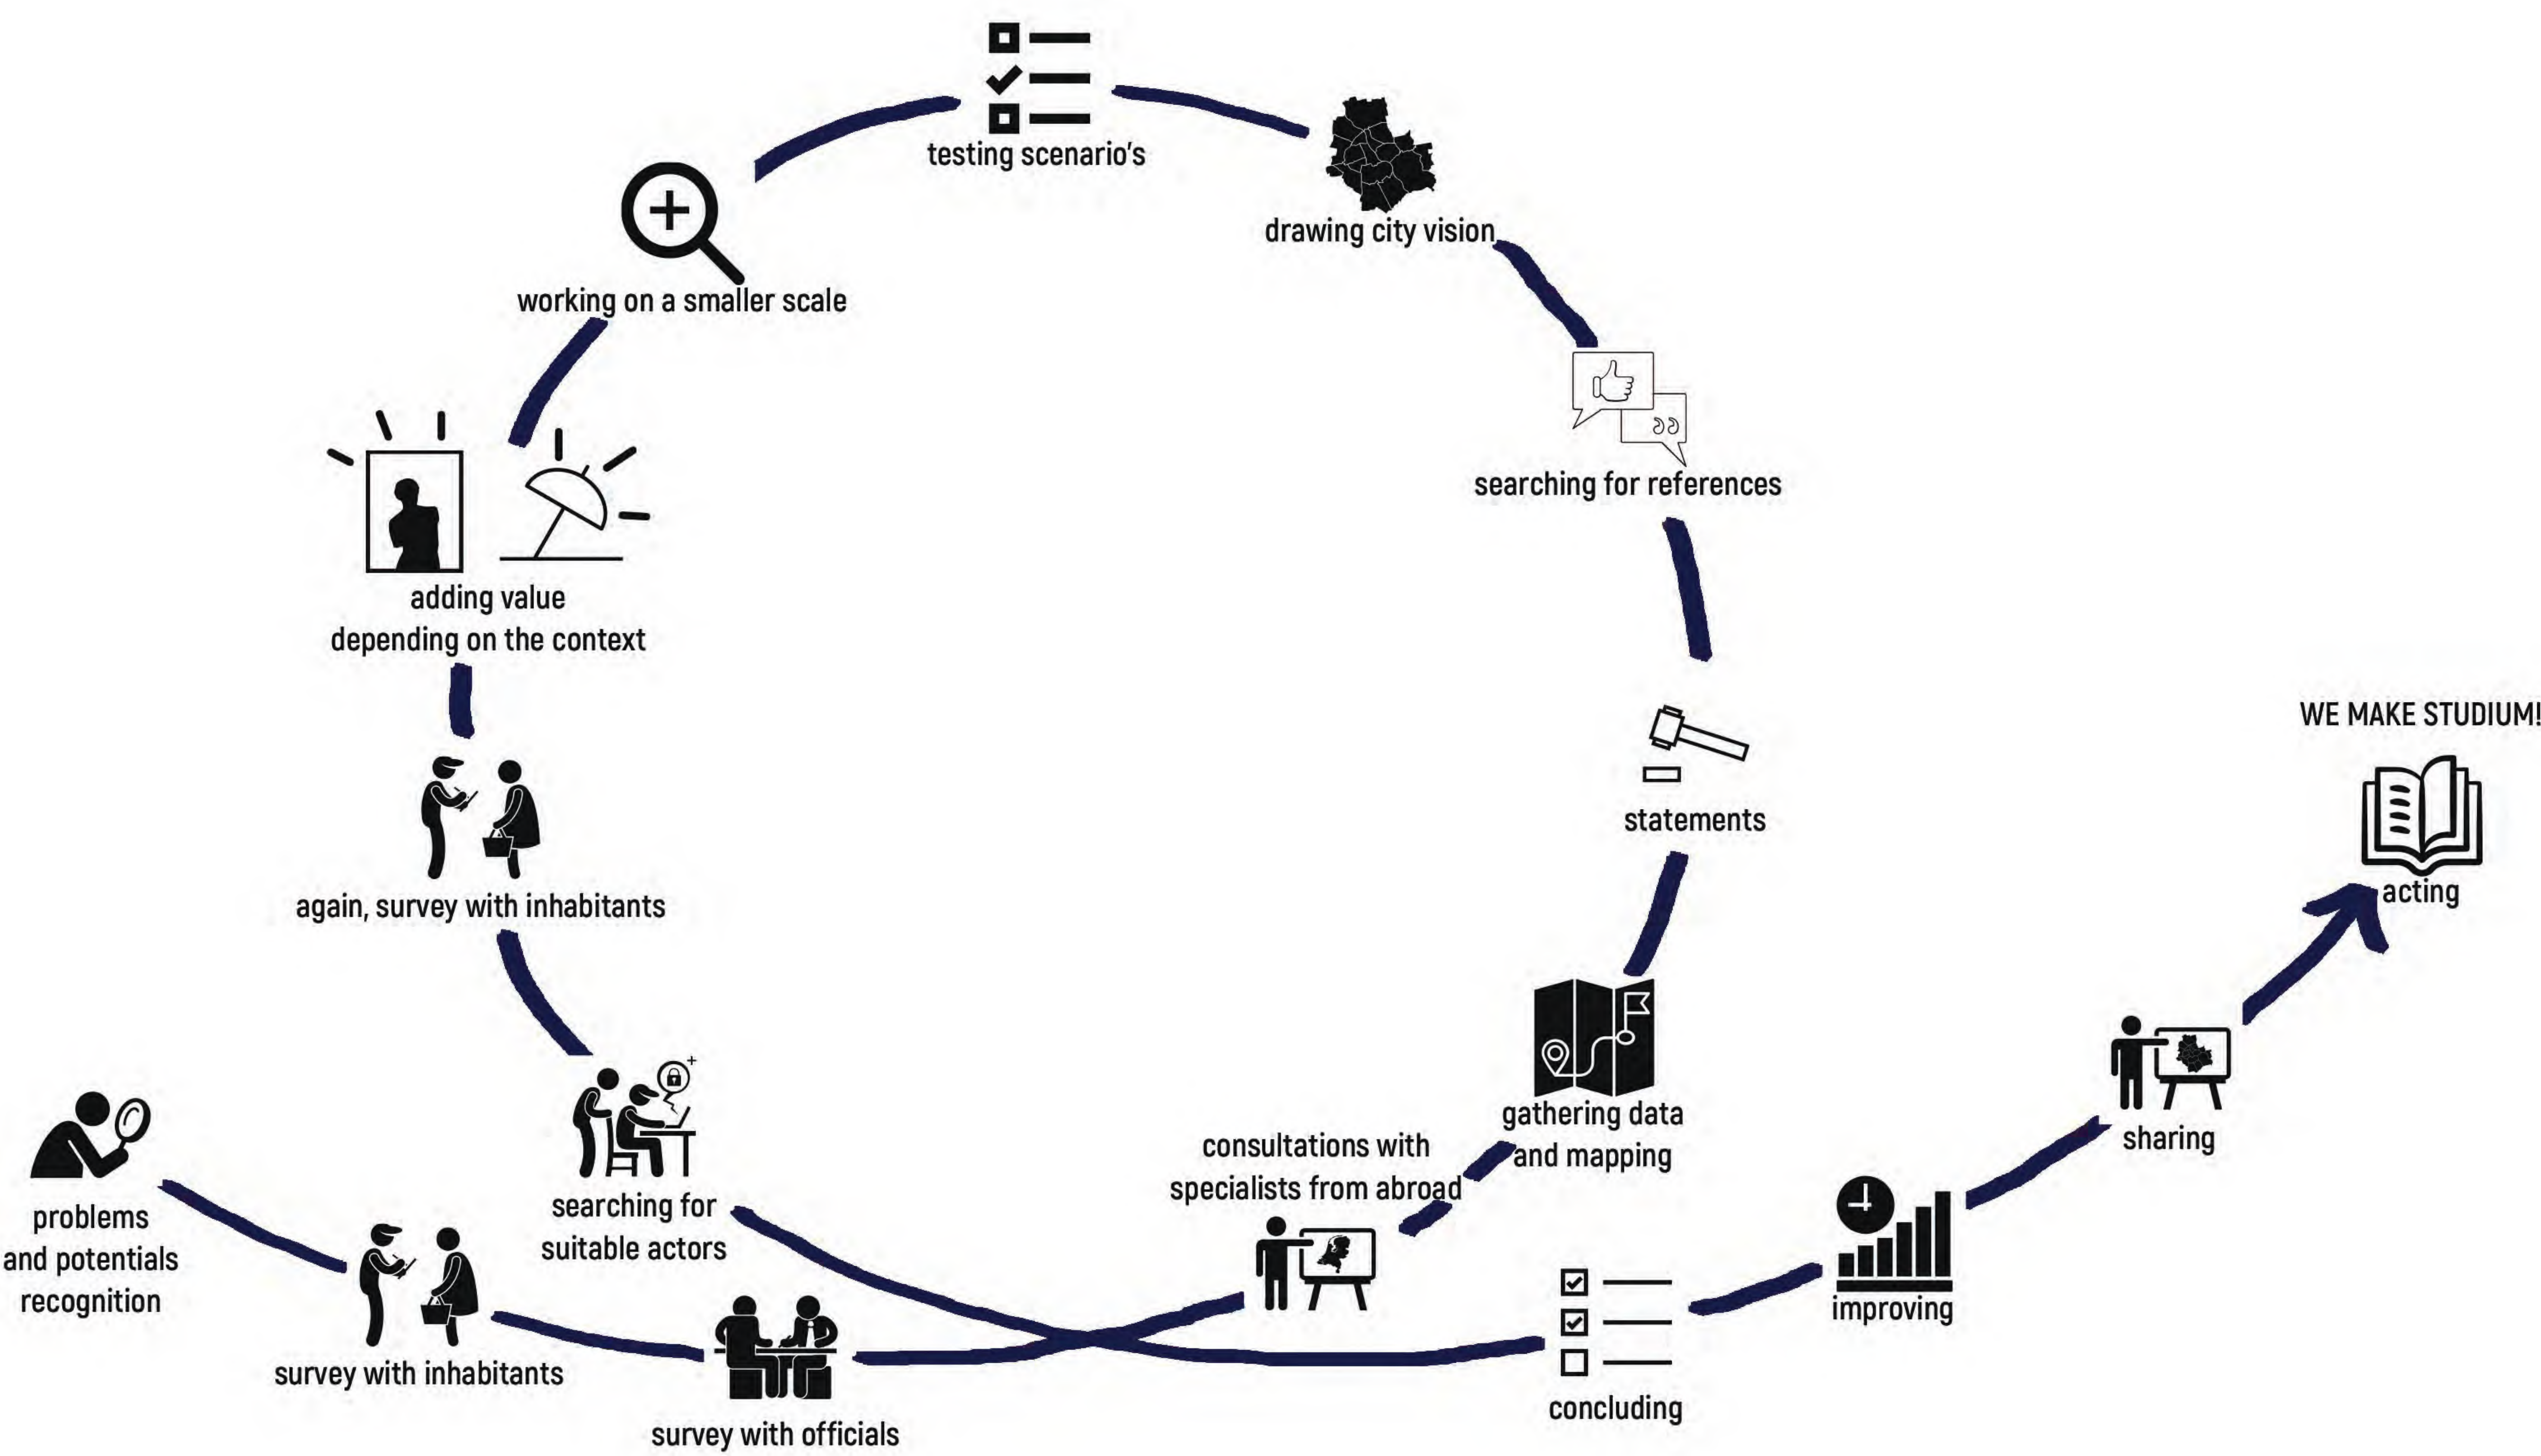

Zodiak constellation platform for dialogue

- 1 Zodiak
- 2 Gersona 16
- 3 Kondratowicza, Targówek
- 4 Magiczna, Białołęka
- 5 targowisko Trocka, Targówek
- 6 Siarczana, Targówek
- 7 Kawęczyńska, Praga North
- 8 bazar Rózyckiego, Praga North
- 9 Hallera Square, Praga North
- 10 Modlińska 257, Białołęka
- 11 District Council, Białołęka
- 12 Old Bielany
- 13 Marymont hall, Żoliborz
- 14 Grunwaldzki Square, Żoliborz
- 15 Chomiczówka, Bielany
- 16 Niedźwiadek, Ursus
- 17 Włochy Station
- 18 Garden of Cosmos, Włochy
- 19 Wola hall, Bemowo
- 20 Karuzela club, Bemowo
- 21 Górczewska, Wola
- 22 Redutowa, Wola
- 23 Mołdawska, Ochota
- 24 skwer Broniewskiego "Orszy"
- 25 Podchorążych, Mokotów
- 26 new urban district, Mokotów
- 27 Nałęczowska, Wilanów
- 28 Nugat, Ursynów
- 29 Gotarda, Mokotów
- 30 Kinowa, Praga South
- 31 Chruściela, Rembertów
- 32 Centrum, Wesoła
- 33 Falenica Station, Wawer
- 34 Międzylesie, Wawer
- 35 Przyczółek Grochowski, Praga South

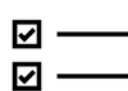

WHEN

city vision making process [2.5 years]

city vision making process based on spatial conditions and local centres relations

-  1 Problems and potentials recognition
-  2 Survey with inhabitants, anquettes and face to face contact
-  3 Consultations with city makers
-  4 Consultations with specialists from abroad
-  5 Gathering data and mapping
-  6 Deeper research, findings, first statements
-  7 Searching for references
-  8 Drawing a vision on a city scale, structural act, standards embracing the whole city and creating its image
-  9 Testing scenario's on a middle scale, local act, areas of different characteristics, creating also the city image
-  10 Design on a small scale districts with a relation to mentioned urgancy and fascinations
-  11 Applying expected and unexpected acts that bring positive energy and create discussion
-  12 Again, consultation the design with users
-  13 Searching for matching actors, gathering informations concerning possible processes
-  14 Conclusions
-  15 Design improvement
-  16 Sharing the concept, spread the world, visualise the vision
-  17 Conclude and act

"Dancing on ruins" 1945
